

VIG Alfa Absolute Return Investment Fund

A series HUF MONTHLY report - 2024 MARCH (made on: 03/31/2024)

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In the US, the main market-driving event remains the Federal Reserve's interest rate meeting and subsequent press conference. As expected, the key rate was left unchanged, but Jerome Powell made waves at the press conference afterwards. The Fed chairman said, albeit implicitly, that the Fed will no longer aim to keep inflation below 2% and will focus on the unemployment rate. This is a complete reversal of previous statements. Whereas the Fed chairman had previously stressed that his priority was to reduce US inflation, he is now prepared to cut interest rates even if inflation remains higher than expected. This, in turn, puts the investment spectrum on a completely different footing. If the central bank's priority is no longer to reduce inflation, and if it is prepared to cut interest rates because of weak unemployment data, then monetary policy will effectively be reminiscent of the 1970s. Relatively low economic activity and high inflation. That would not be good for anyone, and we can be sure that the markets will test the Fed chairman. In Hungary, the Hungarian National Bank cut its key rate by 75 basis points to 8.25% in March. Vice-president Barnabás Virág said the decision was unanimous. He added that the interest rate will be lowered in smaller increments in the future and that he expects it to be between 6-7% by the summer. The MNB expects inflation to fall to around 5-6% by 2024, and that in the future the forint's appreciation and depreciation will have a greater impact on inflation rates. Following the rate decision, the forint weakened slightly against the euro, rising above the 395 level.

In March, the fund generated positive returns thanks to its positions in regional corporates, the Romanian government bond portfolio, and a weakening forint. The fund confidently continued to reduce its Hungarian small-cap portfolio, decrease the hedge rate of foreign currency assets into forint, increase its exposure to Romanian euro government bonds, and reduce its position playing the fall of the DAX index. We will only purchase equities in the event of a severe correction in the short term, as we believe they are currently overpriced and overbought compared to bonds. This year's yield rally in the bond market presents greater opportunities for investors. We are considering extending the maturity of the bond portfolio in both the developed and Hungarian government bond markets with confidence.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 7%
ISIN code:	HU0000703970
Start:	02/10/2006
Currency:	HUF
