

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In the US, the most important market event remains the Federal Reserve's interest rate meeting and the subsequent press conference. Investors will be trying to guess when the Fed will cut rates for the first time and how many rate cuts there will be in 2024. 2023 has ended with the idea that this year the economy will either land hard, meaning a recession, or soft, meaning the economy will slow but there will be no recession. At the rate-setting meeting, it was decided not to cut interest rates just yet as inflation is falling, but there are signs that inflation could rise again in the future. According to the central bank president, "it would be inappropriate to lower interest rates before there is greater certainty that inflation is on a sustainable path towards the 2% target".

The Hungarian National Bank cut its key interest rate by 100 basis points to 9.00% in January. The decision was not unanimous, but according to the bank's vice-president Barnabas Virág, a large majority supported the higher rate cut. The decision was heavily influenced by the fact that inflation has fallen faster than market and central bank expectations, and that although global political risks remain, but these have not led to an increase in energy prices. The Hungarian economy is experiencing strong and widespread disinflation. Consumer prices rose by 3.8% year-on-year in January, bringing inflation within the central bank's tolerance band. According to the Vice-President's forecast, the key interest rate will be lowered to 6-7% by the end of the first half of the year. Following the rate decision, the forint weakened against the euro, rising above the 390 level.

In February, the Alfa fund delivered positive returns due to the weakening forint, good performance of foreign currency bank and corporate bonds, and Hungarian equities amid widening capital market optimism. The fund's asset mix changed several times during the month. Although the weakening and then strengthening of the forint at the beginning of the month was actively traded, the fund's exposure to the forint weakening increased significantly by the end of the month. We sold our holdings in Hungarian blue-chip stocks and half of small-cap stocks, which had reported strong quarterly results, resulting in a decrease in our equity exposure. Additionally, we purchased S&P500 puts and opened DAX shorts in anticipation of a potential negative correction in the equity market. The proceeds from the equity sales were used to increase the fund's liquidity by investing in one-year Hungarian bonds. Therefore, we have significantly reduced the fund's risk level and only plan to increase it in the event of a severe equity market correction.
