

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to create an investment portfolio that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon while achieving the Fund's Sustainability Objectives. With a view to achieving these objectives, the Fund may invest in a variety of instruments, i.e. it holds primarily equity and bond-type instruments, while it may also invest in collective securities and enter into derivative transactions, subject in each case to the relevant investment limits. The fund does not have a geographical specification. In order to realise the investment objectives, the asset groups in the Fund's portfolio may be varied freely, without having to adhere to a predetermined risk profile.

The Fund's investment strategy is based on sustainable value creation, aiming to build an actively managed and sufficiently diverse portfolio that takes into account both sustainability criteria and the fundamentals of the assets held. The Fund's asset allocation strategy is based on the asset allocation model used by the Fund Manager, the Investment Clock, used by the Fund Manager to determine the asset mix with the best risk to return potential at a given point of the economic cycle. In addition to asset allocation, the Fund Manager aims to achieve the financial and sustainability objectives of the Fund through active stock and bond selection policies. Stock selection is based on sustainable growth, through the selection of stocks of companies able to achieve outstanding performance both financially and in terms of ESG risks, thus creating long-term shareholder value. When selecting bonds, the Fund Manager seeks to maximise the proportion of green bond issues, taking into account existing market constraints.

MARKET SUMMARY

In the US, the most important market event remains the Federal Reserve's interest rate meeting and the subsequent press conference. Investors will be trying to guess when the Fed will cut rates for the first time and how many rate cuts there will be in 2024. 2023 has ended with the idea that this year the economy will either land hard, meaning a recession, or soft, meaning the economy will slow but there will be no recession. At the rate-setting meeting, it was decided not to cut interest rates just yet as inflation is falling, but there are signs that inflation could rise again in the future. According to the central bank president, "it would be inappropriate to lower interest rates before there is greater certainty that inflation is on a sustainable path towards the 2% target".

The Hungarian National Bank cut its key interest rate by 100 basis points to 9.00% in January. The decision was not unanimous, but according to the bank's vice-president Barnabas Virág, a large majority supported the higher rate cut. The decision was heavily influenced by the fact that inflation has fallen faster than market and central bank expectations, and that although global political risks remain, but these have not led to an increase in energy prices. The Hungarian economy is experiencing strong and widespread disinflation. Consumer prices rose by 3.8% year-on-year in January, bringing inflation within the central bank's tolerance band. According to the Vice-President's forecast, the key interest rate will be lowered to 6-7% by the end of the first half of the year. Following the rate decision, the forint weakened against the euro, rising above the 390 level.

The Fund closed February up by more than 2%. Equities were the main contributor to the Fund's performance. The equity weighting ranged between 30% and 35% over the month, and while exposure to developed markets was reduced, Central Europe remained heavily weighted in the Fund. Within the region, the main contributors were the very strong performing banking sector (OTP, Komercni and Greek banks) and Hungarian small caps (Dunahouse, Gspark). Within corporate bonds, bank bonds were the best performers, while European government bonds captured more of February's performance. The A Fund's open currency exposure was around 20%, which certainly helped the A Fund's returns. The Fund's developed market exposure, mainly in AI, was realized at the end of the month, but we continue to see good opportunities in Central European markets. The very low bond risk was slightly increased during the month after the correction in February.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 6.5%
