

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

In April, Polish bonds experienced a weak month: the yield curve moved higher, yields on the 3 year maturity increased by 22-, on the 5 year maturity 24-, and on the 10 year maturity 28 basis points. At the beginning of the month, the Polish central bank kept the base rate unchanged, so it remained at 5.75% in line with market expectations. The communication from the central bank governor remained hawkish, they are satisfied with the current low inflation, but potential rate cuts were not discussed by the Monetary Policy Council, because they expect the inflation to bounce back. But the scale of this increase is subject to high uncertainty. VAT on food has been reinstated this month, although the impact of this increase on prices is so far limited by market competition, but energy shields will cease to operate in the second half of the year, which will drive inflation up significantly. Based on the current expectations headline CPI may increase towards 4,5-5% around year end. Currently the inflation is 2,4% year on year in April according to the preliminary estimates, which was already a rebound from the previous month 2%. The Purchasing Managers' Index (PMI) decreased to 45.9 in April from the previous month's 48, arriving below market expectations. The index is still below the 50 threshold, indicating a contraction, as both output and new orders continued to decline due to the uncertain economic environment. Industrial production posted a fall of 6% in the third month of the year, thus arrived below market expectations. As for the state budget, the government generated a deficit of 16,663.9 million PLN in the third month of the year, bringing the 12-month rolling budget deficit to 2.75% of GDP.
