

VIG Alfa Absolute Return Investment Fund

C series CZK MONTHLY report - 2024 MAY (made on: 05/31/2024)

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In the US, inflation and unemployment remain the most important market indicators. At its May meeting, the US Federal Reserve left its key interest rate unchanged and Fed Chairman Jerome Powell said at the press conference that there was a high probability that there will be no more rate hikes in the future. Monthly unemployment data was weaker than expected, supporting the Fed chairman's decision, but year-on-year inflation did not fall. The question that has been asked repeatedly is what the Fed will do if inflation stabilizes at a higher than expected level but unemployment starts to rise, threatening a possible recession. The US national debt is increasing from month to month, so it would be in the interest of fiscal policy makers to keep the Fed funds rates low, thereby reducing the amount of interest paid on the debt, but if inflation does not fall and new rate cut cycle is initiated, the US economy could easily enter a stagflationary environment.

In Hungary, the Hungarian National Bank cut its key interest rate by a further 50 basis points to 7.25% in May. The decision was unanimous, with the bank's deputy governor, Barnabás Virág, saying that the key rate could fall to 6.75%-7.00% by mid-year if macroeconomic data remain favorable. However, inflation has started to rise again, albeit slightly, which will limit the National Bank's room for maneuver. The forint strengthened to a three-month high against the euro during the month, but started to weaken after the rate cut, approaching the 390 level by the end of the month.

In May, Alfa achieved a positive return, with the equity portfolio contributing positively and the forint strengthening negatively. During the month, we further reduced the small-cap equity allocation, purchased regional currency bonds and closed out the remaining EURHUF short positions at 384, taking advantage of the strengthening forint. This leaves the EUR-denominated investments in the fund unhedged, as we expect the forint to weaken gradually. We will only increase the risk of the fund in the event of a market correction.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 4%
