

VIG BondMaxx Total Return Bond Investment Fund

A series HUF MONTHLY report - 2024 MAY (made on: 05/31/2024)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

In early May, President Joe Biden ordered an increase in tariffs on imports from China, including EVs, batteries, semiconductors, solar cells and critical minerals. The EC's spring economic forecast estimates Eurozone GDP to raise by 0.8% this year and to accelerate further to 1.4% in 2025. Sovereign bond yields declined moderately on the release. Later in the month, the Eurozone composite PMI for May signalled moderate expansion in Q2 '24, driven by services, while price pressure eased. The minutes of the FOMC's May 1st meeting appeared to be hawkish, while Fed Governor Christopher Waller said he needs to see "several more months of good inflation data" to vote for a rate cut. UK CPI inflation fell less than expected, making a BoE rate cut in June unlikely. In core bond markets, 10Y yields increased by 5-10bps. In the last week of May, Eurozone inflation data surprised to the upside, rising to 2.6% YoY in May from 2.4% in April, due to a rise in services inflation. Former US President Donald Trump was found guilty of falsifying business records in a criminal trial in New York. US consumer confidence picked up last month, but Q1 '24 GDP growth was revised down and the May Beige Book showed that firms' outlooks had deteriorated. Sell off in government bonds continued along with curves bear-steepening. The 10-year Bund yield reached 2.70%. EM debt and corporate-credit spreads remained resilient. Equity markets corrected modestly from recent peaks. EUR/USD was volatile but trendless, while USD/JPY retreated from peaks above 157. EUR/HUF outperformed, moving closer to 390. The fund still keeps its Ukrainian exposure (despite being decreased a bit on very strong YTD performance), and waits for improvement in the Ukrainian-Russia war; the fund started to relocate some of the duration to the EM credit space along with a slight decrease of the exposure to the core markets, in this light, we opened positions in Azeri and Serbian sovereigns, adjusted positions in Croatia and decreased positions in the UK's long-end, further intention to keep or to add to the current exposure to the core rates and/or EM credit markets while decreasing Hungarian risk stays in place.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 6.5%
ISIN code:	HU0000709597
Start:	01/12/2011
Currency:	HUF
