

VIG Central European Equity Investment Fund

EI series EUR MONTHLY report - 2024 JANUARY (made on: 01/31/2024)

INVESTMENT POLICY OF THE FUND

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e., the current settlement currency of the benchmark (CEE region currencies), depending on the market processes. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

In January, markets were still trying to decide whether or not the economic scenario outlined by the Federal Reserve would materialize. Since last November, the Fed has been saying that the economy will be soft landing, despite a 5.25% interest rate and several macroeconomic data points pointing to a recession in the US economy. Investors who positive about the future are looking at how much AI will reform the US economy and what fundamental changes it will bring to the economy. But there are those who believe that the Fed has raised interest rates too high in an attempt to curb inflation and that a recession is inevitable. But if it starts to cut rates because of a potential recession and inflation starts to rise again, the Fed will be backed into a corner. In 2024, the Fed's decisions will be even more influenced by macro data and markets could be more volatile than usual.

The Hungarian National Bank cut its key rate by another 75 basis points to 10.00%. Inflation also continued to fall in November, to 5.5% according to KSH data, and could fall below 5% in January. In December, the National Bank had indicated that it could cut the key rate by up to 100 basis points, but it stuck to 75 basis points due to the weakening forint. Interestingly, after the lower-than-expected rate decision, the forint strengthened and traded below 385 against the euro at the end of the month.

Central European stock markets as a whole closed January at around their year-end levels. This time, however, the Polish market was the laggard, while the Hungarian market was the best performer. Magyar Telekom had a particularly strong month, rising almost 15% on analyst upgrades and expectations of a strong fourth quarter. Within the banking sector, OTP, Erste and Czech banks also performed well, while Polish banks were more affected by the correction. The weakest sectors were utilities and retail, the former due to falling electricity prices in Europe and the latter due to worse than expected retail sales data. The Fund's Polish overweight was significantly reduced in December last year, but the correction in January was used to buy again, bringing the Fund's equity weight to 107% at year-end.
