

VIG Developed Market Short Term Bond Investment Fund

El series EUR MONTHLY report - 2024 MAY (made on: 05/31/2024)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

In early May, President Joe Biden ordered an increase in tariffs on imports from China, including EVs, batteries, semiconductors, solar cells and critical minerals. The EC's spring economic forecast estimates Eurozone GDP to raise by 0.8% this year and to accelerate further to 1.4% in 2025. Sovereign bond yields declined moderately on the release. Later in the month, the Eurozone composite PMI for May signalled moderate expansion in Q2 '24, driven by services, while price pressure eased. The minutes of the FOMC's May 1st meeting appeared to be hawkish, while Fed Governor Christopher Waller said he needs to see "several more months of good inflation data" to vote for a rate cut. UK CPI inflation fell less than expected, making a BoE rate cut in June unlikely. In core bond markets, 10Y yields increased by 5-10bps. In the last week of May, Eurozone inflation data surprised to the upside, rising to 2.6% YoY in May from 2.4% in April, due to a rise in services inflation. Former US President Donald Trump was found guilty of falsifying business records in a criminal trial in New York. US consumer confidence picked up last month, but Q1 '24 GDP growth was revised down and the May Beige Book showed that firms' outlooks had deteriorated. Sell off in government bonds continued along with curves bear-steepening. The 10-year Bund yield reached 2.70%. EM debt and corporate-credit spreads remained resilient. Equity markets corrected modestly from recent peaks. EUR/USD was volatile but trendless, while USD/JPY retreated from peaks above 157. EUR/HUF outperformed, moving closer to 390. We added to the Italian and Portuguese duration and switched from Belgian government papers into Croatian and Serbian ones, amid stayed positive with a tactically cautious bias towards asset class overall.
