

## INVESTMENT POLICY OF THE FUND

The Fund aims to share in the returns of the Polish stock market, and to profit from Polish economic growth through stock prices and dividend income. In accordance with the risk characteristics of equity investments, the Fund qualifies as a high-risk investment. According to the Fund Manager's intentions, the bulk of the Fund's portfolio is made up of the shares of foreign companies issued through public offerings. The primary investment targets are the securities, traded on the stock exchange or about to be listed on the stock exchange, of companies that operate in Poland or that derive a significant portion of their revenues from Poland, or whose shares are listed on the Warsaw Stock Exchange. The Fund may also invest in equities of other Central and Eastern European companies (Austria, Czech Republic, Hungary, Russia, Romania and Turkey). When developing the portfolio, the shares determine the nature of the Fund, and thus the proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund holds more than 30% of its assets in currencies other than the local currency (HUF).

## MARKET SUMMARY

In the US, inflation and unemployment remain the most important market indicators. At its May meeting, the US Federal Reserve left its key interest rate unchanged and Fed Chairman Jerome Powell said at the press conference that there was a high probability that there will be no more rate hikes in the future. Monthly unemployment data was weaker than expected, supporting the Fed chairman's decision, but year-on-year inflation did not fall. The question that has been asked repeatedly is what the Fed will do if inflation stabilizes at a higher than expected level but unemployment starts to rise, threatening a possible recession. The US national debt is increasing from month to month, so it would be in the interest of fiscal policy makers to keep the Fed funds rates low, thereby reducing the amount of interest paid on the debt, but if inflation does not fall and new rate cut cycle is initiated, the US economy could easily enter a stagflationary environment.

In Hungary, the Hungarian National Bank cut its key interest rate by a further 50 basis points to 7.25% in May. The decision was unanimous, with the bank's deputy governor, Barnabás Virág, saying that the key rate could fall to 6.75%-7.00% by mid-year if macroeconomic data remain favorable. However, inflation has started to rise again, albeit slightly, which will limit the National Bank's room for maneuver. The forint strengthened to a three-month high against the euro during the month, but started to weaken after the rate cut, approaching the 390 level by the end of the month.

The main Polish stock indices closed May with further gains. Apparel stocks performed strongly, with CCC rising 41% on expectations of a significant improvement in profitability. The issue of divestment of carbon assets continues to be a concern for investors in utilities, and positive news on this issue during the month led to a significant rise in utility share prices. The Fund underperformed its benchmark for the fifth month of the year, but continues to outperform over the year. The underperformance in May was due to an underweight in utilities with carbon-based assets, but an overweight in apparel companies helped the portfolio's relative performance. The utilities sector is underweight relative to the benchmark, while we are selective in our stock selection in the banking and consumer discretionary sectors. The Fund's average equity exposure in May was 9% higher than the benchmark.
