Call **+36 1 477 4814** for more information!

VIG Asset Management Hungary Closed Company Limited by Shares is supervised by the **National Bank of Hungary** with respect to this document containing key information.

## What is this product?

**Type:** public, open-ended, harmonised in accordance with the UCITS Directive. **Currency of the series:** EUR **Custodian:** UniCredit Bank Hungary Zrt.

**Benchmark:** 70% MSCI Emerging Markets ex China Net Return USD Index (Bloomberg ticker: MICXBRV Index) + 30% MSCI World with EM Exposure Net Total Return Index (Bloomberg ticker: M1W00EXE Index) **Term:** A The fund has an indefinite term, and does not expire, so the investment fund shares can be redeemed at any time.

**Objective:** The aim of the Fund is to share in the performance of companies benefiting from the growth of developing economies, through share price increases or dividend payments of listed companies, either directly (through investments in individual stocks) or indirectly (through ETFs or mutual Funds), while taking environmental, social and governance (ESG) criteria into account. The Fund does not directly invest in shares of Chinese companies within the emerging market universe. The geographical distribution is partly determined by the MSCI Emerging Markets Ex China Index, in which, besides a significant Asian (ex China) focus, European and Latin American companies are also heavily represented, and partly by the MSCI World with Emerging Markets (EM) Exposure Index, in which American and European companies represent the greatest weight. The use of stock and index futures is permitted in order to hedge and effectively build the Fund's portfolio. In selecting the stocks, the Fund pays special attention to the ESG compliance of individual companies; therefore, besides analysing financial factors, portfolio managers also consider environmental, social and governance factors in the investment decision process. The Fund Manager seeks to build a portfolio in which the positive ESG characteristics of companies prevail, i.e. companies with high ESG scores are overrepresented in the portfolio as compared to companies with low ESG scores. The environmental criterion covers the elements where a business interacts with the environment. This includes, for example, the energy usage, waste management, and emission of pollutants of corporations, as well as the preservation of natural resources. Social criteria include all relations of a corporation with external partners, customers and internal employees. Corporate governance criteria include the legal conditions affecting the reliable operation of a corporation. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. No individual investor's decisions can be made in the Fund.

**The main factors influencing the Fund's returns:** The main factors influencing the Fund's returns are: changes in the prices of financial instruments in the Fund's portfolio, the risks assumed by the Fund, gains/losses arising from the currency exposure within the Fund, and changes in the Fund's operating and other costs. The Fund can achieve returns through the appreciation of financial instruments in its portfolio. The calculation of the Fund's returns is based on Appendix 3 of Bszt. (Act CXXXVIII of 2007).

**Yield, yield payment:** The Fund does not pay yield against the capital growth, and the entire capital growth will be reinvested in accordance with the Fund's investment policy. Investors can realise the capital growth as the difference between the purchase and redemption prices of the Investment Fund Shares they own, as a price gain.

**Information about sustainability:** The Fund qualifies as a financial product promoting environmental or social characteristics, or a combination of those characteristics. (SFDR, Article 8)

**Intended retail investor:** in certain cases, this fund is not suitable for investors, who want to withdraw their money within the recommended retention period.

**Termination of the Fund:** The fund manager is obligated to terminate the public open-ended investment fund if the average equity of the fund is lower than twenty million forints over a period of three months. The rules concerning the termination of the Fund, the sale of the Fund's assets, and the disbursement of the estate are set out in Sections 75-79 of Act XVI of 2014 on Collective Investment Trusts and Their Managers and on the Amendment of Financial Regulations.

## What are the risks and what could I get in return?

**Risk indicator:** The summary risk indicator provides guidance regarding the risk level of this product compared to other products. It shows the likelihood that the product will cause financial loss due to the movements of the markets or because we are unable to pay you.

The summary risk indicator presents the risk/profit ratio of the product based on the summary of the market risk indicator calculated from past returns. Historic data are not necessarily

reliable indicators of the future risk profile, however, so this may change over time. Not even the lowest risk category can be understood as a fully risk-free investment. This product does not include protection against future market performance, so you may lose a part or all of your investment. If we are unable to pay the amount due to you, you may lose your entire investment.

The risk indicator assumes that you keep the product until the end of the recommended retention period (4 years) végéig megtartja a termékét. The actual risk may be significantly higher if you redeem the product earlier, and it is possible that you get back a lower amount. The product is classified into the fourth, medium risk class of the 7-tier risk scale, because bad market conditions during the implementation of the Fund's investment policy may possibly affect the Fund's ability to pay you. The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately.

The unfavourable, moderate and favourable scenarios presented are illustrations presenting the worst, average and best performance of the product – or prior to the launch of the product, the relevant benchmark – in the past 10 years. Future market developments may vary.

Investment: once 10,000 EUR		If you exit after 1 year	If you exit after the recommended holding period (4 years)
<b>Stress scenario</b>	What you might get back after costs	7,307 EUR	2,479 EUR
	Annual average return	-26.93%	-29.43%
<b>Unfavorable scenario</b>	What you might get back after costs	7,962 EUR	10,169 EUR
	Annual average return	-20.38%	0.42%
<b>Moderate scenario</b>	What you might get back after costs	10,612 EUR	12,584 EUR
	Annual average return	6.12%	5.91%
<b>Favourable scenario</b>	What you might get back after costs	15,546 EUR	18,610 EUR
	Annual average return	55.46%	16.80%

This table shows the amount of money you can get back at the end of the first year and at the end of the recommended holding period in accordance with the different scenarios, assuming that you invest 10,000 EUR. The “unfavourable” scenario type reflects the most unfavourable development of the value of the product with respect to investments made between September 2014 and March 2024. The “moderate” scenario type reflects the average development of the value of the product with respect to investments made between March 2014 and March 2024. The “favourable” scenario type reflects the most favourable development of the value of the product with respect to investments made between March 2014 and March 2024. The numbers presented include all costs of the product itself (though they may not include all the costs that you may be paying to your consultant or distributor). The numbers do not take into account your personal tax situation, which may also influence the amount you get back. The stress scenario shows the amount you can get back from the invested capital in case of extreme market circumstances.

### What happen if the Fund Manager is unable to pay?

The potential insolvency of the Fund Manager does not jeopardise the repayment of the investors' savings in the Fund. If, based on the contract between the investor and the VIG Asset Manager – as Head Distributor – or the investment service provider managing the securities account, the VIG Asset Manager or the contracted service provider is unable to release to the investor the security held for the investor, the **Investment Protection Fund (by its Hungarian abbreviation: “BEVA”)** undertakes to be liable for indemnification. BEVA's indemnity obligation will become effective if the Supervisory Authority initiates liquidation proceedings against the BEVA member based on the law, or a court orders the liquidation of the BEVA member. The insurance provided by BEVA will not cover losses arising from the change of value of the investment. BEVA will pay the claim of the investor entitled to indemnification for up to an amount of one hundred thousand euros (in aggregate per person and investment enterprise, i.e., per BEVA member). The rate of the indemnity to be paid by the Fund is one hundred percent up to an amount of one million forints, and is one million forints and ninety percent of the portion above one million forints in the case of claims exceeding one million forints.

### What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

**Costs over time** The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product [and how well the product does (where applicable)]. The amounts shown here are illustrations based on an example investment amount and different possible investment periods. We have assumed: In the first year you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario. 10,000 EUR is invested.

The performance of the Fund is measured against its designated benchmark index. The Fund pays a performance fee to the Fund Manager, based on the returns exceeding the Fund's benchmark index, the performance fee rate (20%), and the amount of assets on which the return was achieved by the Fund Manager. The Fund pays a performance fee to the Fund Manager even in the case of a negative absolute return, provided that the conditions for outperforming the benchmark index, i.e., achieving a positive relative return, are met.

	If you exit after 1 year	If you exit after 2 years	If you exit after the recommended holding period (4 years)
<b>Total costs</b>	230 EUR	576 EUR	1 152 EUR
<b>Annual cost impact (*)</b>	2.30%	2.30%	2.30%

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 8,21% before costs and 5.91% after costs.

### Composition of costs

One-off costs upon entry or exit	Entry costs	maximum 5.0%	This includes distribution costs equivalent to 5% of the invested amount (500 EUR) This is the maximum amount charged to you. The person selling the product to you will inform you about the actual fee.
	Exit costs	maximum 3.5%	3.5% of your investment before it is paid to you.
Ongoing costs (taken each year)	Management fees and other administrative or operative costs	2.19%	2.19% of the annual value of your investment. This is an estimate based on the actual costs of the past year.
	Transaction costs	0.11%	0.11% of the annual value of your investment. This is an estimate based on the costs incurred during our purchase and sale of investments on behalf of the product. The actual amount will vary depending on how much we buy and sell.
Incidental costs	Performance fees	0.00%	The actual amount will vary depending on how well your investment performs. The above aggregate cost estimate is based on the average of the past 5 years.

## How long should I hold it and can I take money out early?

**Recommended holding period: 4 years**

The Product has no cooling-off or withdrawal period, as its term is indefinite being open-ended, i.e., it can be redeemed at any time. This Fund is not suitable for investors who intend to reclaim their money from the fund within the minimum recommended investment time. If any holder of the Investment Fund Share(s) places a redemption or conversion order for the investment fund shares of the same investment fund within 10 sales days of the time of the purchase or conversion order (T+10), the distributors will charge a penalty premium of 2% in excess of the regular premium, which will be paid to the Fund. The time interval required for the penalty premium to apply shall be determined based on the FIFO principle.
