

VIG Alfa Absolute Return Investment Fund

UI series USD MONTHLY report - 2024 JUNE (made on: 06/30/2024)

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

US equity and bond markets have been mixed recently, mainly influenced by macroeconomic data and other news. Although the pace of growth has not been strong, bond yields have fallen, suggesting that investors have turned to safer assets. There have been some worrying signs in household consumption and the labor market, but overall growth has not yet collapsed. The dollar has remained strong as the Fed still has room to cut rates but has not yet done so. News from the US technology sector had a positive impact on the futures indices, especially with announcements in the areas of artificial intelligence and technology developments.

The main event in Hungarian markets was the HNB's June interest rate decision, with analysts expecting the last rate cut. As expected, the rate was cut by 25 basis points, which temporarily strengthened the forint, but it remained volatile throughout the month. Although business confidence remained weak, the BUX index performed well and consumer confidence improved slightly, giving rise to optimism in the retail sector. The exchange rate of the forint came under pressure, partly due to the impact of political events in France and partly due to domestic inflationary concerns. In the bond markets, demand for government bonds was stable, as investors can obtain real yields in forint terms.

The Alfa fund had a positive month in June thanks to the regional equity portfolio and positions against the forint, while the general rise in yields had a slightly negative impact on the fund's price. During the period, we increased the long government bond portfolio in regional currencies and also purchased cheap regional equities. The weakening of the forint has benefited the portfolio, but it has been fully hedged near EURHUF 400 to mitigate currency risk. We anticipate continued band trading in the forint. Bonds are expected to perform better than before in the coming period, as they are the asset class most likely to benefit from slowing global growth and better-than-expected inflation.
