

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e. the current settlement currency of the benchmark (CEE region currencies). The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency composition based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF). To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio. No individual investor's decisions can be made in the Fund.

The most important factors influencing the return of the Fund are: changes in the prices of financial instruments in the Fund's portfolio, the risks undertaken by the Fund, gains/losses resulting from the currency exposure in the Fund, and changes in the operational and other expenses of the Fund. The Fund achieves returns through the appreciation of financial instruments in its portfolio. The calculation of the Fund's return is based on Appendix 3 of Act CXXXVIII of 2007 (Hungarian Securities Act).

MARKET SUMMARY

US equity and bond markets have been mixed recently, mainly influenced by macroeconomic data and other news. Although the pace of growth has not been strong, bond yields have fallen, suggesting that investors have turned to safer assets. There have been some worrying signs in household consumption and the labor market, but overall growth has not yet collapsed. The dollar has remained strong as the Fed still has room to cut rates but has not yet done so. News from the US technology sector had a positive impact on the futures indices, especially with announcements in the areas of artificial intelligence and technology developments.

The main event in Hungarian markets was the HNB's June interest rate decision, with analysts expecting the last rate cut. As expected, the rate was cut by 25 basis points, which temporarily strengthened the forint, but it remained volatile throughout the month. Although business confidence remained weak, the BUX index performed well and consumer confidence improved slightly, giving rise to optimism in the retail sector. The exchange rate of the forint came under pressure, partly due to the impact of political events in France and partly due to domestic inflationary concerns. In the bond markets, demand for government bonds was stable, as investors can obtain real yields in forint terms.

The Fund ended June higher, with Polish, Hungarian and Romanian equity markets in particular outperforming and closing in positive territory, while Austrian and Czech equity indices ended the month lower. Polish cyclical sector stocks (including banking and oil) were outperformers, but the 4 Hungarian blue chips also performed very strongly. The Fund slightly underperformed its benchmark, although it continues to outperform for the year as a whole. Relative performance was boosted by an overweight to Polish and Hungarian markets, but reduced by our overweight to Polish retail consumption and underweight to some utilities companies. The Fund had an average equity exposure in June that was 10% higher than the benchmark index. At the country level, we are overweight Polish and Hungarian markets.
