

VIG Hungarian Bond Investment Fund

A series HUF MONTHLY report - 2024 JUNE (made on: 06/30/2024)

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

In June, the year-over-year price increase in Hungary surprised on the downside again, inflation arrived at 3,7%. Food prices remained low, and the recent decline in fuel prices also slightly restrained inflation. In its June inflation report, the Hungarian National Bank lowered the average inflation forecast for this year. Instead of the previously forecasted 3.5 - 5% range, the average inflation for this year is now expected to be between 3 - 4.5%. At the rate-setting meeting at the end of June, the central bank reduced the base rate by 25 basis points as expected, bringing it to 7%. Thus, they reached the previously communicated 6.75-7% level by June, and although they did not explicitly state that the rate-cutting cycle for this year had ended, they emphasized that they would continue to operate in a data-driven mode and could suspend rate cuts if necessary. Therefore, the forward guidance has changed: previously, the focus was on the pace of rate cuts, but now the appropriate interest rate level is the main question. Meanwhile, due to the slowdown in the US economic cycle (declining purchasing manager indices) and lower-than-expected inflation data, US yields decreased in June. Simultaneously, domestic yields also ended the month lower. The decline was more significant for shorter maturities, with yields decreasing by 20-40 basis points, which caused the domestic yield curve to shift from inversion towards normalization. In the medium term, further decreases from the current yield levels could occur if signs of economic slowdown intensify. Additionally, measures aimed at reducing the domestic budget deficit could also contribute to a reduction in domestic yield levels.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% MAX Index
ISIN code:	HU0000702493
Start:	03/16/1998
Currency:	HUF
