

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

US equity and bond markets have been mixed recently, mainly influenced by macroeconomic data and other news. Although the pace of growth has not been strong, bond yields have fallen, suggesting that investors have turned to safer assets. There have been some worrying signs in household consumption and the labor market, but overall growth has not yet collapsed. The dollar has remained strong as the Fed still has room to cut rates but has not yet done so. News from the US technology sector had a positive impact on the futures indices, especially with announcements in the areas of artificial intelligence and technology developments.

The main event in Hungarian markets was the HNB's June interest rate decision, with analysts expecting the last rate cut. As expected, the rate was cut by 25 basis points, which temporarily strengthened the forint, but it remained volatile throughout the month. Although business confidence remained weak, the BUX index performed well and consumer confidence improved slightly, giving rise to optimism in the retail sector. The exchange rate of the forint came under pressure, partly due to the impact of political events in France and partly due to domestic inflationary concerns. In the bond markets, demand for government bonds was stable, as investors can obtain real yields in forint terms.

The Fund's strategy is to benefit from innovation in different industries. Artificial intelligence companies are currently one of the most prominent themes in the portfolio. Equity markets continue to see a very concentrated market rally, with the AI story at the heart of it. Over the past year, the "Magic Seven" stocks (Apple, Microsoft, Alphabet, Amazon, Nvidia, Meta Platforms and Tesla) have risen 57% on average, while the remaining 493 companies in the S&P 500 index have risen only 15%. Moreover, the divergence between the performance of these seven stocks and the rest of the market has accelerated over the past three months: while these seven stocks have risen 21% on average, the rest of the market has fallen 0.5%. At the beginning of June, ahead of the 2024 Worldwide Developer Conference presentation, we managed to increase our exposure to Apple in time for the event, where Apple finally unveiled its own artificial intelligence strategy. This could even set the stage for a new iPhone sales cycle, once again having a compelling argument for why it's worth it to customers to buy a new model. We are also currently investing in technology and innovation-related megatrends such as e-mobility (electric cars and related battery technologies), digitalization and related entertainment (metaverse, e-sports), fintech and robotics.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000732938
Start:	03/11/2024
