

INVESTMENT POLICY OF THE FUND

The Fund aims to share in the returns of the Polish stock market, and to profit from Polish economic growth through stock prices and dividend income. In accordance with the risk characteristics of equity investments, the Fund qualifies as a high-risk investment. According to the Fund Manager's intentions, the bulk of the Fund's portfolio is made up of the shares of foreign companies issued through public offerings. The primary investment targets are the securities, traded on the stock exchange or about to be listed on the stock exchange, of companies that operate in Poland or that derive a significant portion of their revenues from Poland, or whose shares are listed on the Warsaw Stock Exchange. The Fund may also invest in equities of other Central and Eastern European companies (Austria, Czech Republic, Hungary, Russia, Romania and Turkey). When developing the portfolio, the shares determine the nature of the Fund, and thus the proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund holds more than 30% of its assets in currencies other than the local currency (HUF).

MARKET SUMMARY

In July, the US stock market experienced significant volatility. Stocks reached historic highs and then fell back, especially in the technology sector. A strong rotation unfolded, with investors buying winners from previous periods and selling laggards such as smaller capitalization stocks. The main reason for the correction in chipmakers was the new US sanctions imposed on exports to China in the middle of the month. On the macro front, inflation statistics came in better than expected, leading investors to believe a September rate cut as a possibility again. The more favorable inflation trajectory was also reflected in longer yields, with the yield on 10-year US Treasuries falling to around 4.21%. Highlights for Hungarian markets included the Hungarian National Bank's July interest rate decision, which resulted in a 25 basis point cut, as expected, leaving the Hungarian base rate at 6.75%. According to the HNB, the main influence on policymakers was the declining US interest rate expectations, but the June inflation figure of 3.7% was also lower than expected. According to the HNB, there could be another 1-2 rate cuts in 2024, meaning that the Hungarian base rate could fall to as low as 6.25%.

In July, the main Polish stock indices ended the month with a sell off, and globally it was also one of the weakest equity markets. There was no significant divergence between the heavily weighted oil and banking sectors, but we saw a more significant fall in consumer staples stocks following a weaker report from Jeronimo Martins. Overall, utilities stocks were stronger than the broad index, although not all of them managed to rise during the month. The Fund underperformed its benchmark in July. The underperformance stems from an underweight in the carbon-asset utilities sector and an overweight in the apparel sector. The utilities sector is underweight against the benchmark, while we selectively bought stocks in the banking and consumer discretionary sectors. We are slightly overweight the banking sector. During the month, we reduced our weighting in telecoms sector stocks and continued to realise profits in Benefit Systems shares. On average, the Fund had an equity exposure 4% higher than the benchmark index in July.
