

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e. the current settlement currency of the benchmark (CEE region currencies). The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency composition based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF). To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio. No individual investor's decisions can be made in the Fund.

The most important factors influencing the return of the Fund are: changes in the prices of financial instruments in the Fund's portfolio, the risks undertaken by the Fund, gains/losses resulting from the currency exposure in the Fund, and changes in the operational and other expenses of the Fund. The Fund achieves returns through the appreciation of financial instruments in its portfolio. The calculation of the Fund's return is based on Appendix 3 of Act CXXXVIII of 2007 (Hungarian Securities Act).

MARKET SUMMARY

August started with a correction in developed economies, including the US. Contributing to the downturn was the likelihood of a hard landing in the economy as opposed to a soft landing. On the other hand, the Japanese central bank's interest rate hike in response to the weakening yen negatively affected investors who had leveraged equity positions financed with cheap Japanese yen. This caused a stock market crash in Japan that spilled over to the United States. US Federal Reserve Chairman Jerome Powell has indicated that the Fed may start cutting interest rates from September, but, he sees no justification for a drastic cut. This uncertainty has increased market volatility and many investors have fled into bonds, and yields have fallen. At the end of the month, Nvidia published its second quarter results, which exceeded investor expectations, but the company's less optimistic forecasts were disappointing. Nvidia, seen as the flagship of the artificial intelligence wave, is also being watched by many as the performance of many technology companies could be affected by its month-end report. In Hungary, the MNB's interest rate policy has reached a turning point, as the one-and-a-half-year cycle of rate cuts appears to be coming to an end, with the central bank leaving the base rate at 6.75% at its August policy meeting. This is consistent with declining inflationary pressures, but we do not rule out further rate cuts in the event of weak economic performance. Another important consideration is the forint exchange rate, which has shown considerable volatility recently, so we believe that an implicit moderation of this may have played a role in the decision.

The Fund ended August with a negative return and also slightly underperformed the benchmark index. The poor performance this time was due to weakness in global equity markets. This time the Polish market outperformed, while the Czech, Hungarian and Austrian markets were weak. On a sectoral basis, retail trade was again the weakest performer, while the pharmaceuticals sector performed well. The Fund's positioning relative to the benchmark remained defensive, but some individual positions again took away from performance, with Wizzair and Pepco being the most significant, as in July. However, the Fund's relative performance was helped by the underweight in the utilities sector and some individual overweights (CCC, Raiffeisen).
