

## INVESTMENT POLICY OF THE FUND

The Fund aims to achieve a higher return than that of short-term bonds by investing in bonds of low volatility and limited-risk profile issued or guaranteed by certain specified states, quasi-sovereign corporations, national banks or supranational institutions. The Fund invests most of its available assets in low-risk instruments, i.e. bonds issued or guaranteed by the Hungarian state or states with a credit rating at least equal to or better than the latter's latest rating (or by their debt management agencies), quasi-sovereign companies, national banks or supranational institutions. The Fund may hold bank deposits, or cash, and enter into repo and reverse repo transactions. The maximum interest rate risk with respect to the Fund as a whole (i.e. its duration) is 3 years, while the weighted average maturity of the individual securities is a maximum of 10 years. For bonds denominated in currencies other than Hungarian forint, the asset manager seeks to fully hedge the foreign exchange risk, and may only deviate from this at the expense of risky assets (i.e. in the case of foreign exchange under/over-hedging). The Fund uses a small portion of its available assets to purchase risky instruments – domestic and foreign equities, equity indexes, higher risk bonds, foreign exchange, commodity market products and collective investment securities on the spot and futures markets. The Fund may enter into both long and short trades. Based on the approach followed when purchasing risky assets, the Fund is an absolute return fund: it selects investment options with the best possible expected return/risk ratio from the options available to it on the domestic and international money and capital markets. There is no possibility for making individual investor decisions in respect of the Fund.

## MARKET SUMMARY

August began with a correction in the developed economies. Contributing to the decline was an increase in the probability of a hard landing scenario. Also, the Bank of Japan's interest rate hike in response to the weakening yen had a negative impact on investors who had financed leveraged equity positions with cheap Japanese yen loans. Federal Reserve Chairman Jerome Powell has hinted that the Fed may start cutting interest rates from September, but sees no justification for a drastic cut. This uncertainty has increased market volatility and many investors have fled into bonds, where yields have fallen. At the end of the month, Nvidia reported second quarter results that beat investor expectations, but the company's less optimistic guidance was disappointing. Nvidia, seen as the flagship of the artificial intelligence wave, is also being closely watched as the performance of many technology companies could be affected by its end-of-month report. In Hungary, the MNB's interest rate policy has reached a turning point as the 18-month cycle of rate cuts was paused, with the central bank leaving the key rate on hold at 6.75% at its August meeting. During August, there was considerable volatility in the markets, which created more opportunities, so the Fund was very active in risk assets. At the beginning of the month, we shorted the German stock index (DAX), which we closed with a significant profit on 5 August during the panic. A few days later, we went long the Polish equity index, WIG20, on which we made a nice profit by mid-month. As we approached the all-time highs, we also closed our gold long position, which we had opened in July. In the middle of the month, after a significant bounce, we also tried a US S&P 500 short, but closed it quickly as the market continued to rally, activating our tight stop loss level. We then opened a long position in the NASDAQ 100, which we managed to close around the August local high, leaving us with a gain of over 2%. The Fund's risk asset positions did very well during the month, so the Fund performed well in absolute terms, but in relative terms this proved to be enough to offset the underperformance of the bond exposure against the benchmark. Although the NBH moved cautiously during the month and did not cut the base rate, the deep slide in HTB yields continued, mainly for technical reasons, with these yields falling almost 100 bps below the base rate, which was not favorable for the Fund.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% RMAX Index + 0.5%
