

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

In August, the performance of the Polish bonds was mixed: on the 3-year maturity yields decreased by 6 basis points, on the 5 year maturity remained mostly unchanged, and on the 10 year maturity yields increased by 10 basis points. The base rate is still at 5,75% and at the rate setting meeting in the beginning of September it was left unchanged as well. Currently the inflation is 4,3% year on year in August according to the preliminary estimates, thus marked the fifth consecutive month of rising consumer prices and it was mainly driven by higher food prices. The Purchasing Managers' Index (PMI) rose to 47.8 in August from the previous month's 47.3 arriving above market expectations. Thus the index remained in contraction territory for the 28th consecutive month. New orders are still in a decreasing trend but export sales declined sharply as well during the month. Industrial production posted an increase of 4.9% in the seventh month of the year, but arrived below market expectations of 7,3%. As for the state budget, the government generated a deficit of 12,864.9 million PLN in the seventh month of the year, bringing the 12-month rolling budget deficit to 4.45% of GDP. In August the draft budget for 2025 has been accepted, which turned out to be a large increase compared to this year, according to which the headline state budget deficit will be 7,3% of GDP. We decreased our duration overweight in the yield range of 5,1-5,2% from Polish long end bonds, leading to a slight underweight position, which was profitable especially after the announcement of the 2025 budget plan. Given the global macro environment, we interpreted the fast increase in Polish bonds yields as a panic and as a result we bought back majority of the previously sold Polish long end bonds.
