

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

In September, Hungarian inflation was below market expectations, the rate of year-on-year price increase was 3%, with which we reached the central bank target for the first time in a long time. Thus inflation could reach the bottom this year, because from October, an upward trend may begin again. At its rate-setting meeting at the end of September, the Monetary Council reduced the base rate by 25 basis points, bringing it down to 6.5%. At the press conference following the meeting, Barnabás Virág - Deputy Governor of the Central Bank - emphasized that decisions will continue to be data-driven, significantly influenced by fresh inflation data, decisions made by central banks in developed markets, risk perceptions, and consumer confidence. In its September inflation report, the central bank revised its GDP forecast for this year downward, predicting that the economy could grow by 1.4% this year. Inflation is expected to be below 4% this year, but next year the rate of price increases is projected to be slightly higher than previously thought, it could arrive between 2.7% and 3.6%, due to the rise in transaction levy. Economic fundamentals remain weak, with the industrial sector struggling, particularly affected by the decline in demand for electric vehicles. Long-term yields decreased slightly in September. On the 5 year maturity yields decreased by 23 basis points and on the 10 year maturity, yields decreased by 15 basis points compared to the beginning of the month. The valuation of domestic bonds remained mostly unchanged in a regional comparison, and the budget is progressing according to the revised deficit target. Overall, we have a positive outlook on the asset class, and the larger bond maturity due in October could support the domestic market, generating greater demand, particularly on the short end of the yield curve.
