

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

US equity markets started September at near-peak levels in a seasonally weak September, but saw a significant correction in the middle of the month. The soft-landing narrative held at the beginning of the month as the inflation was lower than expected. Investors waited for the Fed rate decision with more attention than usual, and a 25 bps cut in line with the soft-landing was more likely at the beginning of the month. This was supported by positive macro data such as low inflation and GDP growth forecasts. However, the labor market data showed a worrying sign, with employment growth slowing down, leading the Fed to finally cut rates by 50 basis points. The stock market reacted positively to the higher cut. The decision contributed to a temporary weakening of the dollar and a decline in short term yields. In Hungary, the gradual moderation in inflation was a positive, but the slowdown in Hungarian exports, especially of automotive products, further worsened the economic outlook. The forint exchange rate fluctuated, mainly due to uncertainties surrounding international interest rate decisions. Overall sentiment was strongly influenced by the international economic slowdown and fears of a recession in Europe. Easing energy prices helped the Hungarian economy, but industrial production and domestic consumption remained under pressure, limiting the growth potential of markets. The MNB cut its base rate by another 25 basis points to 6.50%.

The AI industry has also seen significant news over the past month, particularly developments in voice technologies, the transformation of OpenAI into a for-profit company, and quarterly reports from companies involved in the creation/development of AI. It is worth noting, that even within the sectors, there have been massive divergences in performance in recent times; such as the weakness of Alphabet against Meta, that has hit all-time-high, or the strength of Tesla against Amazon in the consumer discretionary sector. Artificial intelligence companies still make up one of the most dominant themes in the Fund's portfolio, but within this trend we have moved away from hardware companies towards the software industry.
