

# VIG Ozon Annual Capital Protected Investment Fund

A series HUF MONTHLY report - 2024 SEPTEMBER (made on: 09/30/2024)

## INVESTMENT POLICY OF THE FUND

The Fund aims to achieve a higher return than that of short-term bonds by investing in bonds of low volatility and limited-risk profile issued or guaranteed by certain specified states, quasi-sovereign corporations, national banks or supranational institutions. The Fund invests most of its available assets in low-risk instruments, i.e. bonds issued or guaranteed by the Hungarian state or states with a credit rating at least equal to or better than the latter's latest rating (or by their debt management agencies), quasi-sovereign companies, national banks or supranational institutions. The Fund may hold bank deposits, or cash, and enter into repo and reverse repo transactions. The maximum interest rate risk with respect to the Fund as a whole (i.e. its duration) is 3 years, while the weighted average maturity of the individual securities is a maximum of 10 years. For bonds denominated in currencies other than Hungarian forint, the asset manager seeks to fully hedge the foreign exchange risk, and may only deviate from this at the expense of risky assets (i.e. in the case of foreign exchange under/over-hedging). The Fund uses a small portion of its available assets to purchase risky instruments – domestic and foreign equities, equity indexes, higher risk bonds, foreign exchange, commodity market products and collective investment securities on the spot and futures markets. The Fund may enter into both long and short trades. Based on the approach followed when purchasing risky assets, the Fund is an absolute return fund: it selects investment options with the best possible expected return/risk ratio from the options available to it on the domestic and international money and capital markets. There is no possibility for making individual investor decisions in respect of the Fund.

## MARKET SUMMARY

US equity markets started September at near-peak levels in a seasonally weak September, but saw a significant correction in the middle of the month. The soft-landing narrative held at the beginning of the month as the inflation was lower than expected. Investors waited for the Fed rate decision with more attention than usual, and a 25 bps cut in line with the soft-landing was more likely at the beginning of the month. This was supported by positive macro data such as low inflation and GDP growth forecasts. However, the labor market data showed a worrying sign, with employment growth slowing down, leading the Fed to finally cut rates by 50 basis points. The stock market reacted positively to the higher cut. The decision contributed to a temporary weakening of the dollar and a decline in short term yields.

In Hungary, the gradual moderation in inflation was a positive, but the slowdown in Hungarian exports, especially of automotive products, further worsened the economic outlook. The forint exchange rate fluctuated, mainly due to uncertainties surrounding international interest rate decisions. Overall sentiment was strongly influenced by the international economic slowdown and fears of a recession in Europe. Easing energy prices helped the Hungarian economy, but industrial production and domestic consumption remained under pressure, limiting the growth potential of markets. The MNB cut its base rate by another 25 basis points to 6.50%.

The fund remained active during the month. For domestic short duration bonds, we started to prepare for the 2024/C government bond maturity in October, so we bought HTBs and short government bonds maturing in 2026: the significant maturity in October, combined with the interest rate cut cycle, expected issuance and regulatory requirements, could further drive down domestic short yields. In addition, we opened equity index shorts on the weak US labor market data, but later our exposure was stopped out because of the 50bp US rate cut, which, although it protected us from further losses and thus proved to be the right move, overall caused an underperformance of 30-40bp in the fund over the month. Towards the end of the month, the fund added commodity exposure, as pricing is very favorable here, there is a huge short position in oil and geopolitical tensions could help this asset class.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% RMAX Index + 0.5%
ISIN code:	HU0000705157
Start:	03/19/2007
Currency:	HUF
Net Asset Value of the whole Fund:	9,169,090,514 HUF
Net Asset Value of A series:	2,631,188,912 HUF
Net Asset Value per unit:	2.086426 HUF
