

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e. the current settlement currency of the benchmark (CEE region currencies). The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency composition based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF). To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio. No individual investor's decisions can be made in the Fund.

The most important factors influencing the return of the Fund are: changes in the prices of financial instruments in the Fund's portfolio, the risks undertaken by the Fund, gains/losses resulting from the currency exposure in the Fund, and changes in the operational and other expenses of the Fund. The Fund achieves returns through the appreciation of financial instruments in its portfolio. The calculation of the Fund's return is based on Appendix 3 of Act CXXXVIII of 2007 (Hungarian Securities Act).

MARKET SUMMARY

The result of the US presidential election was the main event that moved markets in November. Trump's victory can be explained, among other things, by the poor economic performance perceived by voters, who said that inflation and economic growth were the most important factors in their vote. This is interesting because the US economy is expanding at a steady 2.7% year-on-year rate, and inflation (2.6%) and unemployment are at low levels. Trump's election triggered a stock market rally on expectations of a looser regulatory environment and other business support measures. Bond yields reacted with a sharp rise on expected proposals by the President-elect to increase the public deficit, but this receded during the month. In general, markets have seen high volatility, driven by Trump's protectionist tariff policy plan and general policy uncertainties. The Fed's 25bp rate cut was in line with expectations, with analysts expecting a further rate cut by the end of the year. Economic growth in Europe remains relatively weak, but inflation is stabilizing at low levels. The US presidential election and Trump's draft tariff policy have had a negative impact on growth prospects in Europe, especially in the automotive sector. Tariffs towards China are also hampering the recovery of European industry, reflected for example in weak German manufacturing figures. The green transition is an ongoing issue, where the trade war with China is negatively affecting the supply of solar panels, a key element of net zero climate targets.

The Fund ended the month with a slight rise. Markets across the region were very mixed, with the Romanian market taking a major hit from election uncertainty and the Hungarian market rising nearly 8% in local currency. Among the sectors, retail was the best performer this time, although there were wide variations across sectors. Commodity-related sectors were the weakest performers, but other cyclical industries also underperformed the index. The most important event of the month was the US presidential election, which could have a significant impact on the long-term performance of regional equities. Although there was some bounce after the election, sellers re-emerged during the month, mainly in the Polish market, due to the escalation of the war in Ukraine. The Fund remains overweight against the benchmark index, mainly in Hungarian and Polish equities.
