

INVESTMENT POLICY OF THE FUND

The Fund's goal is to achieve capital growth through active portfolio management by investing in green bonds issued by governments and corporations in developed and emerging markets, while also advancing the Fund's sustainability objectives. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund aims to promote environmental and/or social characteristics and pursues sustainable investment, thereby falling under Article 9 of the SFDR regulation. The Fund's credit rating restriction is that it may only purchase bonds with an investment-grade rating. With a reasonable risk approach, the Fund seeks the highest possible capital growth, primarily through asset allocation in green bonds available in global bond markets. The Fund's investment strategy is built on sustainable value creation, aiming to develop an actively managed, well-diversified portfolio that considers both sustainability criteria and the fundamentals of its assets. To achieve this, it primarily invests in developed market reem corporate and government bonds issued in foreign currencies, and may also hold emerging market green corporate and government bonds. The bond portfolio may also include short- and long-term, fixed or variable rate bonds issued by mortgage banks, other financial institutions, municipalities, or other economic organizations. The Fund's goal is sustainable investment, which it plans to achieve primarily, though not exclusively, through a positive environmental impact within the ESG universe. In pursuit of this, it mainly intends to invest in bonds from countries with low greenhouse gas emission intensity, a strong exercise of civil liberties, and low rates of social violations. Additionally, the Fund plans to invest in bonds of companies with a low ecological footprint, contributing through their activities to solving global environmental issues, such as the transition to a low-carbon economy or a circular economic model. The Fund may hold assets with exposures differing from the base currency up to 100%. The Fund Manager generally hedges currency exposures to the target currency (EUR) at 100%, but may also hold open currency positions depending on market expectations. The Fund invests at least 80% in assets issued and traded outside Hungary.

MARKET SUMMARY

Last month's forecast update to the upside in the US core inflation probably reminded to the Fed of the policy edge and limited room for policy error as it tries to balance monetary policy in a higher neutral rate and expansionary fiscal policy environment. The rise of 0.27% over month, the strongest since March, raises the question as to the Fed should pause in December or not. Treasuries and the greenback surprisingly didn't react much to the PCE print. Instead, month-end demand and short covering in Treasuries pushed down yields across the curve and profit taking lashed the dollar back. The 10y TIIPs moved below 2%, a recent month low. According to the recent Fed minutes, many members support a step-by-step rate cuts. Treasuries performed strongly, with 10y yields stopping almost at 4.20% (200DMA) – down c.30bp from the post-election high. NFP, CPI and the Fed meeting pose upside risk for bond yields later in the year. Kiwi and Canadian bonds performed strongly last month. JGBs underperformed but the yen fought back in the last week of November, tracking the lower Nikkei and firmer expectations of a BoJ rate hike next month after the acceleration in Tokyo inflation. BRL sky-rocketed to a new all-time low below 6.0. In the Eurozone the ECB is expected to cut rates by 25bp in December, and further 3x25bp cuts are expected for 2025. European economic outlook is still gloomy as tariff risks linger, thus European yields are expected to decrease in 2025. We have slightly increased the overweight duration position in the fund in November and bought 2039 French green bonds.
