

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

The Fund performed well last month. At the beginning of November, a smoother-than-expected Republican victory led investors to buy US equities vigorously. In particular, sectors benefiting from deregulation, an improved economic growth outlook and higher inflation expectations performed well, setting new records for index levels. Overall, the US equity market has never reacted to an election result with such a strong rise. The anticipated tax cuts may be most beneficial for small capitalization stocks and consumer cyclical goods producers, and in addition, several players in the technology industry, especially software and intellectual property producers, are less exposed to a tax-cap type trade war, so we have continued to rotate the Fund in this direction. In addition, the world's most valuable company and one of the largest exposures in our portfolio, Nvidia, reported for the month. The "weapons supplier of the AI war" reported strong quarterly results, with revenue of \$35.1 billion and adjusted earnings of 81 cents per share, which exceeded analyst expectations. Revenue from data centers doubled and demand for the company's Blackwell chips was seen as exceptionally high. However, the revenue forecast of \$37.5 billion for the fourth quarter was slightly below the market's most optimistic expectations, partly due to rising chip manufacturing costs. On a non-sectoral adjusted basis, US equities continue to trade at much higher prices relative to other developed countries, partly due to the fact that US technology giants' profits have been on a steady upward trend in recent years and these companies have much lower earnings volatility, i.e. are less affected by economic cycles. However, it is a warning sign for the long-term outlook for US equity markets that the equity risk premium dipped into negative territory in November. Artificial intelligence companies still make up one of the most prominent themes in the Fund's portfolio, but we are also confident in companies involved in uranium mining, water management, cyber defense and fintech.
