

INVESTMENT POLICY OF THE FUND

The Fund's objective is to create an investment portfolio that is intended to achieve capital growth through active portfolio management, investing predominantly in US and European companies. Accordingly, the Fund Manager's investment portfolio is composed of developed-market equities, predominantly securities issued by US and European companies and short-term developed-market government bonds. The Fund pursues an active asset allocation policy. If the Fund Manager considers the prevailing capital market conditions to be unfavourable, it may significantly reduce equity exposure in order to protect capital. If capital market conditions appear ideal for taking equity exposure, the Fund Manager may invest the Fund's assets entirely in equities. On average over a full market cycle, the portfolio maintains an equity ratio of approximately 70%.

The Fund's investment universe includes the developed equity, bond and money markets. The Fund intends to hold liquidity related to trading needs in bank deposits or short-term developed-market government securities. As a general rule, of all the equities in the investment universe, the Fund intends to hold those that are considered the most popular among business partners, employees and investors.

The Fund Manager may significantly reduce equity exposure in the event of a break in a rising trend. In this situation, the Fund mainly holds foreign-currency money-market instruments in its portfolio. In the event of a rising market trend and increasing global risk appetite, the Fund will invest in developed-market equities as mentioned above.

The Fund invests at least 80% in assets that are issued and traded outside Hungary.

MARKET SUMMARY

In December, the U.S. stock market started the month with a notable rally. This surge was fueled by positive earnings reports from tech giants and a robust labor market, with job openings exceeding expectations, which bolstered confidence in the economy. However, as the month progressed, geopolitical tensions and concerns over inflation began to weigh on market sentiment. The market's volatility was further exacerbated by significant economic data releases. The Consumer Price Index (CPI) showed a year-on-year increase of 2.7%, aligning with expectations but still raising concerns about inflation's persistence. This led to fluctuations in major indices, with the Dow experiencing its longest losing streak in decades. As December drew to a close, the market faced profit-taking and a general pullback, with major indices ending the month lower despite a strong overall performance for the year. European markets have faced their own challenges, particularly due to political instability in France, Germany and Austria, which has raised concerns about the governments' ability to implement effective economic policies. The European Central Bank (ECB) is expected to cut rates by 25 basis points, reflecting a response to soft economic activity and stagnant earnings growth across many sectors. The euro area is showing signs of recovery in consumer spending, but fiscal constraints and external pressures, such as U.S. tariffs, cloud the outlook. In Asia, particularly Japan, the economic landscape appears more favorable. Japanese equities have shown resilience, driven by corporate reforms and a return to mild inflation, which has bolstered corporate pricing power and earnings growth. The outlook for Japan remains positive, with expectations of continued earnings growth despite potential challenges from rising U.S. protectionism. In this environment, our quantitative models suggested reducing equity risk on the European markets while maintaining exposure to the US stocks. The average weight of European shares in the Fund's portfolio was nearly zero during December. We started the month with a maximum allocation of 50% for US stocks. When the market volatility picked up after the FED's hawkish guidance on the interest rate path in the wake of the CPI figure, we took some profit in companies which were the leaders of the November-December period, like Tesla, Nvidia and Marvell Technologies.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
