

# VIG Emerging Market ESG Equity Investment Fund

B series EUR MONTHLY report - 2024 DECEMBER (made on: 12/31/2024)

## INVESTMENT POLICY OF THE FUND

The aim of the Fund is to share in the performance of companies benefiting from the growth of developing economies, through share price increases or dividend payments of listed companies, either directly (through investments in individual stocks) or indirectly (through ETFs or mutual Funds), while taking environmental, social and governance (ESG) criteria into account. The Fund does not directly invest in shares of Chinese companies within the emerging market universe. The geographical distribution is partly determined by the MSCI Emerging Markets Ex China Index, in which, besides a significant Asian (ex China) focus, European and Latin American companies are also heavily represented, and partly by the MSCI World with Emerging Markets (EM) Exposure Index, in which American and European companies represent the greatest weight. The use of stock and index futures is permitted in order to hedge and effectively build the Fund's portfolio. In selecting the stocks, the Fund pays special attention to the ESG compliance of individual companies; therefore, besides analysing financial factors, portfolio managers also consider environmental, social and governance factors in the investment decision process. The Fund Manager seeks to build a portfolio in which the positive ESG characteristics of companies prevail, i.e. companies with high ESG scores are overrepresented in the portfolio as compared to companies with low ESG scores.

The environmental criterion covers the elements where a business interacts with the environment. This includes, for example, the energy usage, waste management, and emission of pollutants of corporations, as well as the preservation of natural resources. Social criteria include all relations of a corporation with external partners, customers and internal employees. Corporate governance criteria include the legal conditions affecting the reliable operation of a corporation.

Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF).

## MARKET SUMMARY

The US equity market had an average performance in December, influenced by rising bond yields and mixed economic data. Although the S&P 500 and the Nasdaq index reached new all-time highs, led mainly by the technology sector, the year-end Santa Claus rally did not deliver the expected results. The ISM services sector index showed a solid growth picture, while labor market data indicated a balanced economy. The Fed's 25 basis point interest rate decision in December was in line with expectations, but Powell's speech suggested less rate cuts next year than expected. This caused a sell-off, that markets have not been able to recover from since. Some sectors, such as semiconductors, did not perform well for other reasons, partly explained by market overpricing and sector-specific uncertainties. In Europe, the German DAX index rose to a new high, supported by a favorable yield environment and expected interest rate cuts by the European Central Bank. But the German market also fell back by the end of December, caused by a political crisis like the one in France. The French market was held back by fiscal uncertainty and tensions around political conflicts, in particular a motion of no confidence in the government. Although weak PMI data indicated a slowdown in the Eurozone economy, investment stimulus statements and expected monetary easing improved sentiment in the cyclical sectors.

The Fund returned -0.87% for the month, underperforming the benchmark index. The underperformance was mainly due to the underperformance of the largest overweight in the fund, which was Poland; in addition, large fossil energy producing countries such as Saudi Arabia and the UAE were underweight, while they were among the best performing markets during December. In addition, the Indonesian overweight also took away from relative performance. The Fund started the New Year with an overweight of around 5% against the benchmark index.

## GENERAL INFORMATION
