

INVESTMENT POLICY OF THE FUND

The Fund's goal is to achieve capital growth through active portfolio management by investing in green bonds issued by governments and corporations in developed and emerging markets, while also advancing the Fund's sustainability objectives. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund aims to promote environmental and/or social characteristics and pursues sustainable investment, thereby falling under Article 9 of the SFDR regulation. The Fund's credit rating restriction is that it may only purchase bonds with an investment-grade rating. With a reasonable risk approach, the Fund seeks the highest possible capital growth, primarily through asset allocation in green bonds available in global bond markets. The Fund's investment strategy is built on sustainable value creation, aiming to develop an actively managed, well-diversified portfolio that considers both sustainability criteria and the fundamentals of its assets. To achieve this, it primarily invests in developed market green corporate and government bonds issued in foreign currencies, and may also hold emerging market green corporate and government bonds. The bond portfolio may also include short- and long-term, fixed or variable rate bonds issued by mortgage banks, other financial institutions, municipalities, or other economic organizations. The Fund's goal is sustainable investment, which it plans to achieve primarily, though not exclusively, through a positive environmental impact within the ESG universe. In pursuit of this, it mainly intends to invest in bonds from countries with low greenhouse gas emission intensity, a strong exercise of civil liberties, and low rates of social violations. Additionally, the Fund plans to invest in bonds of companies with a low ecological footprint, contributing through their activities to solving global environmental issues, such as the transition to a low-carbon economy or a circular economic model. The Fund may hold assets with exposures differing from the base currency up to 100%. The Fund Manager generally hedges currency exposures to the target currency (EUR) at 100%, but may also hold open currency positions depending on market expectations. The Fund invests at least 80% in assets issued and traded outside Hungary.

MARKET SUMMARY

Following a 50 basis points rate cut in September and a 25bp cut in November, the FOMC balloted to lower the federal funds target range by another quarter of percent to 4.25-4.50% range. Given the FOMC's new dots projections against a setting of still strong GDP growth and sticky core inflation, the market now forecasts slower and fewer rate cuts ahead. Therefore, the December Fed meeting proved to be more hawkish than expected by the majority of the market participants. This prompted another rise in the U.S. Treasury yields and the U.S. Dollar, pressuring the long end of the curve, bond proxies and EM assets along. The rise in UST yields triggered a market environment, where virtually all asset classes have started to leak. Equity market breadth is already at very low levels though. Meanwhile, US growth expectations are being revised higher more aggressively, as are inflation expectations. Near-term earnings expectations for the S&P 500 are still low though.

Equity-to-bond yield correlations have moved into the negative again with markets being particularly sensitive to rising short-end rates - continued rises in bond yields without better growth might start to weigh more on equities and risky assets overall. Japanese equities have outperformed more than expected boosted by a much lower JPYUSD rate while EM and China equities performed poorly due to headwinds from weak macro data and tariffs. Within commodities oil has rallied while cyclical commodities such as Copper and Iron Ore suffered along with China assets. Gold has not suffered much from rising real yields. The Dollar broadly strengthened despite not weakening in November, in particular against cyclical G10 FX - this extends the 'stronger for longer' Dollar trend, which started in October and has come alongside rising implied FX vol.

Last month we have increased corporate bond exposure via buying short duration green banking bonds and green utility service providers, although keeping the duration position relatively unchanged keeping overweight positioning.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
