

INVESTMENT POLICY OF THE FUND

The primary objective of the Fund is sustainable investment, specifically to have a positive environmental impact. It seeks to go beyond mitigating environmental harm and aims to act as a catalyst for environmental change. While the Fund's primary environmental goal is climate change mitigation, it may also contribute to its sustainability objective through other environmental or social targets. Alongside sustainable investment, the Fund also targets capital growth. It primarily, though not exclusively, aims to achieve its goals through investments in equities and equity ETFs. To support its objective, the Fund may also invest in other transferable and equity-linked securities. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund's goal is sustainable investment, and it thus falls under Article 9 of the SFDR regulation. The Fund does not apply geographical or sector-specific restrictions, allowing it to invest globally, including in emerging markets. It intends to reach its objectives mainly with equity-type assets, primarily but not exclusively through publicly traded shares, ETFs, and open-ended, public investment funds. The Fund's goal is sustainable investment, which it seeks to achieve mainly through a positive impact on environmental factors within the ESG universe. To this end, it plans to invest primarily in companies with a low ecological footprint, which contribute through their activities to solving global environmental issues—such as transitioning to a lower-carbon economy or adopting a circular economic model. The Fund invests mainly, though not exclusively, in companies significantly involved in energy efficiency, renewable and clean energy, pollution control, water supply and technology, waste management and recycling, sustainable agriculture and forestry, and the sharing economy. The Fund does not have a geographical focus, as environmental interests extend beyond normal economic cycles, encompassing generally global, long-term processes that affect the entire world. Since the Fund aims to benefit from long-term growth and has equity market exposure, it is recommended for investors (1) who seek to invest in securities without geographical limitations and are backed by companies that focus on environmental factors in their activities, (2) whose primary goal is sustainable investment, and (3) who have a high risk tolerance and are willing to accept significant fluctuations in the value of their investments. The asset manager has discretionary authority to decide, based on market conditions, whether to reduce currency risk in positions denominated in currencies other than the target currency by entering into hedging transactions. For efficient portfolio management, the exposure from derivative transactions may not exceed 30% of the Fund's net asset value.

MARKET SUMMARY

The US equity market had an average performance in December, influenced by rising bond yields and mixed economic data. Although the S&P 500 and the Nasdaq index reached new all-time highs, led mainly by the technology sector, the year-end Santa Claus rally did not deliver the expected results. The ISM services sector index showed a solid growth picture, while labor market data indicated a balanced economy. The Fed's 25 basis point interest rate decision in December was in line with expectations, but Powell's speech suggested less rate cuts next year than expected. This caused a sell-off, that markets have not been able to recover from since. Some sectors, such as semiconductors, did not perform well for other reasons, partly explained by market overpricing and sector-specific uncertainties. In Europe, the German DAX index rose to a new high, supported by a favorable yield environment and expected interest rate cuts by the European Central Bank. But the German market also fell back by the end of December, caused by a political crisis like the one in France. The French market was held back by fiscal uncertainty and tensions around political conflicts, in particular a motion of no confidence in the government. Although weak PMI data indicated a slowdown in the Eurozone economy, investment stimulus statements and expected monetary easing improved sentiment in the cyclical sectors.

The Fund returned -4.6% during the month. The fall was largely due to the rise in global bond yields, to which the utilities sector is one of the most sensitive - as it has been this time too. All of the Fund's themes ended the month with negative returns, with the worst performers being the previously outperforming recycling-related companies and solar and wind, which fell between 7% and 10%. The Fund started the New Year with a slight underweight position.
