

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

The performance of the Polish bonds was weak in the last month of 2024: on the 3-year maturity yields increased by 39 basis points, on the 5 and 10 year maturities yields increased by 36 basis points compared to the beginning of the month. The base rate is still at 5.75% and at the rate setting meeting in the beginning of December it was left unchanged as well. Currently the inflation is 4.8% year on year in December according to the preliminary estimates, thus the pace of price increases increased slightly. Food and energy prices continued to rise, but a decrease was observed in fuel prices. According to Bloomberg's December survey, the economy is estimated to have grown by 2.8% in 2024, with growth projections of 3.4% for both 2025 and 2026. The Purchasing Managers' Index (PMI) fell to 48.2 in December from the previous month's 48.9 arriving below market expectations. Output declined significantly, and new orders also decreased, albeit at a slower rate, as domestic consumption is beginning to show signs of recovery. Thus the index remained in contraction territory for the 32nd consecutive month. Output declined significantly, and new orders also decreased, albeit at a slower rate, as domestic consumption is beginning to show signs of recovery. Industrial production recorded a 1.5% decline in November. As for the state budget, the government generated a deficit of 12,048.4 million PLN in the eleventh month of the year, bringing the 12-month rolling budget deficit to 5.2% of GDP. We decreased our duration exposure in our Fund: we took slight profit on our tactical US Treasury 10Y long position, while also decreased regional bond exposure, so the Fund hold neutral allocation.
