

VIG Developed Market Short Term Bond Investment Fund

UI series USD MONTHLY report - 2025 JANUARY (made on: 01/31/2025)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

After delivering a 1% of rate cuts last year, the FOMC voted unanimously on its January meeting to hold the federal funds target range steady at 4.25-4.50%. During his press conference, Jerome Powell said on at least five separate occasions that the Committee did not need to be "in a hurry" to make further adjustments to policy rates. US equities moved lower after hitting record highs the last month, driven by an AI-led correction. Eventually, US equities ended the month with a gain of slightly less than 3% amid generally solid earnings and the Fed decision to hold interest rates. European equities recorded their strongest monthly gains since November 2023. The ECB delivered a widely expected 25bp interest-rate cut at its latest meeting and guided for a further reduction in March due to concerns about economic growth. Amid falling bond yields, majority of all the key fixed income assets posted gains. Oil prices fell as US inventory data showed a surprisingly strong increase. In contrast, gold reached an all-time high, touching \$2,800/oz on safe-haven grounds. Most of the major currencies declined against the USD except JPY on tariff speculation. Comments from the BoJ's deputy governor Himino helped push the JPY higher as the BOJ keeps the door open to a sequence of future rate hikes. All key EM currencies declined as well. MXN was the worst performing currency against the USD after the US President announced 25% tariffs on Mexico and Canada. Last month, we remained optimistic on Eurozone rates and initiated only some fine-tuning in the fund composition by adding some German bonds after the pickup in yields. We have turned tactically constructive on rates in January as the new US administration has strong commitment to decrease oil prices, which could lead to lower CPI and bond yield environment. Eurozone bonds should be supported by further European Central Bank rate cuts going forward.
