

## INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

## MARKET SUMMARY

The performance of the Polish bonds was mixed in the first month of 2025: on the 3-year maturity yields increased by 5 basis points and on the 5-year maturity yields increased by 8 basis points. At the long end of the yield curve however, we saw yields falling by 5 basis points. The base rate is still at 5.75% and at the rate setting meeting in January it was left unchanged as well. Despite maintaining a strict communication stance, the market is pricing in a 90-basis-point rate cut for this year and a cumulative 150-basis-point cut by the end of 2026. The Polish economy grew by 2.9% in 2024, making it an outperformer in the Central and Eastern European region. This improved performance was mainly driven by the recovery in consumer spending. The Purchasing Managers' Index (PMI) rose to 48.8 in January from 48.2 the previous month, exceeding market expectations. However, the index has remained below the 50-point threshold for the 33rd consecutive month. While output and new orders continued to decline, the pace of contraction has slowed. Industrial production recorded a 0.2% increase in the final month of the year. Following last year's record-high issuance, another strong wave of bond issuance is expected this year. For the first time since COVID, multiple short-term government securities are planned to be issued again, which could slightly push up the short end of the yield curve.

We started the year with a slight underweight bias, and also had lower exposure to short term bonds than benchmark, and later on we increased our duration exposure to slight overweight bias, which proved to be a good decision.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% TBSP Index
