MONTHLY report - 2025 JANUARY (made on: 01/31/2025)

## INVESTMENT POLICY OF THE FUND

### MARKET SUMMARY

In Switzerland, the inflation outlook looks quite favorable, and according to the central bank's December forecast, the pace of price increases may continue to decline in the first quarter of this year. Inflation is expected to be 0.3% in the first quarter and 0.2% in the second quarter. With Donald Trump's inauguration on January 20, fears of tariffs have resurfaced, as although he has not yet imposed tariffs on the EU, this could happen in the near future. Since Switzerland's economy is heavily dependent on exports and trade, any tariffs would have a significant impact on economic performance. According to central bank governor Martin Schlegel, inflation is currently well within the central bank's target range, so it is not the main risk to the economy. Regarding the continued strengthening of the Swiss franc, he stated that they do not rule out FX interventions or even reducing the key interest rate back into negative territory if the economy requires it. During January, economic activity increased, with the KOF Swiss Economic Institute's economic barometer rising to 101.6 points from 99.6 in the previous month. The main drivers of growth were industry and services, while the construction sector remains weak. At the beginning of the year, Swiss short-term bond yields increased, with a 10-basis-point rise at the 1-year maturity and an 8-basis-point rise at the 3-year maturity.
