

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e. the current settlement currency of the benchmark (CEE region currencies). The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency composition based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. The Fund records its assets in Hungarian forint (HUF). To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio. No individual investor's decisions can be made in the Fund.

The most important factors influencing the return of the Fund are: changes in the prices of financial instruments in the Fund's portfolio, the risks undertaken by the Fund, gains/losses resulting from the currency exposure in the Fund, and changes in the operational and other expenses of the Fund. The Fund achieves returns through the appreciation of financial instruments in its portfolio. The calculation of the Fund's return is based on Appendix 3 of Act CXXXVIII of 2007 (Hungarian Securities Act).

MARKET SUMMARY

Global financial and capital market movements in February were largely driven by Donald Trump's tariff hike policy. The US President imposed significant import tariffs on Mexico, Canada and China, which initially triggered a sharp sell-off in markets. Eventually, the last-minute announcement of a delay in the tariffs eased the mood, but the phenomenon illustrates the volatility of the markets. Despite the trade tensions, the US economy continued to show solid growth, with annual household consumption growth above 4% and subdued inflation creating a favorable environment for the equity markets. In Europe, investor sentiment was also driven by Trump's tariff announcements and the expected EU response. German and French inflation data came in slightly below expectations, reinforcing expectations of a rate cut by the European Central Bank (ECB) this year. As a result, the yield on two-year German government bonds fell by an unprecedented 19 basis points in February. This was partly due to the German elections, in which the AfD performed weaker than expected. In equity markets, the industrial and automotive sectors were particularly sensitive to US tariffs, while defense and energy stocks performed well. EU policymakers are expected to prepare targeted trade responses, which could lead to further volatility in the coming months.

After a strong January, Central European markets closed the second month of the year with a very good performance. Polish equities were the best performers this time, but the Austrian stock market also managed to rise significantly. By contrast, the Hungarian, Czech and Romanian markets were flat. On a sectoral basis, companies in the industrial and oil sectors were the best performers this time, while utilities companies fell overall. The Fund performed well not only in absolute terms but also in relative terms, relative to its benchmark return. This was in part due to the Fund's overweight equity position, particularly in Poland and Hungary. The Fund's individual non-benchmark exposures also performed well, with Wizzair, Magyar Telekom, Dunahouse and Raiffeisen all managing to rise significantly. We remain bullish on Central European equities, as illustrated by the month-end overweight, however we believe the next period could be more volatile.
