

VIG Global Emerging Market Bond Investment Fund

PI series PLN MONTHLY report - 2025 FEBRUARY (made on: 02/28/2025)

INVESTMENT POLICY OF THE FUND

The Fund aims to achieve capital growth by investing in bonds of emerging European countries and state-owned companies. The Fund does not apply credit rating restrictions: it may purchase securities of any country or company with any long-term credit rating. The Fund aims for the highest possible capital growth alongside reasonable risk-taking. The Fund primarily purchases foreign currency emerging market bonds, in addition to which it holds Hungarian local currency short-term and long-term bonds for diversification and liquidity management purposes. The bond portfolio may also include short-term, long-term, fixed or floating-rate, structured and convertible bonds issued by mortgage credit institutions, other credit institutions, local governments or other business entities. The core of the Fund's investments is Central Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), South East Europe (Serbia, Turkey), the Baltics (Latvia, Lithuania) and the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and bonds of majority state-owned companies, in addition to which the Fund holds short-term and long-term Hungarian government securities for diversification and liquidity management purposes. The target weight for bond exposures in the Fund in the 16 countries listed (target countries) is 95%. We do not set a limit on debt classification in the Fund. The Fund may only conclude derivative transactions for hedging purposes, or in the interest of establishing an efficient portfolio. The Fund may also hold non-leveraged bond-type collective investment forms. The Fund may also take on significant foreign currency exposure, which is normally covered 100% by the Fund Manager in the target currency (USD), but depending on market conditions, the Fund may also hold open foreign currency positions.

MARKET SUMMARY

Core rates rallied last month with a pronounced outperformance of US rates, driven by weaker US sentiment data, softer Euro area core inflation figures and a renewed investor focus on tariff concerns leading to a global risk-off move. In the Eurozone, market reaction to the German election was quite subdued at the start of the last week of the month with a modest steepening of the German curve following news of a possible near-term debt brake reform and/or special fund for defence before the new Parliament takes office. The US Dollar struggled last month, ultimately ending 0.7% down as tariff fatigue and lower US yields weighed heavily on the currency. EURUSD was up 0.2% in February, but fared comparatively poorly against GBP with EURGBP down 1.3%. The currency pairs started the month in the red after President Trump announced that tariffs on the EU "will definitely happen" but managed to regain their footing through the next few weeks. GBPUSD ended February up 1.5% as positive risk sentiment and domestic data releases pushed the currency pair higher. Gold climbed, ending the month up 2.2%. Bullion kicked off the month with flair as President Trump's tariff rhetoric spurred safe-haven demand. Following a strong start to the year in January (up 3.2%, MoM), global equities showed clear signs of fading price momentum in February (down 0.8%), which could mainly be attributed to a weakness in the US equity market (down 1.5%).

Last month, we decreased exposure to Argentina on very strong recent performance and moved to more neutral stance towards Mexico, increased exposure to Ecuador and Poland along with adjusted down positions in Turkey and South Africa, we initiated positions in Angola, we favour Europe over other regions on the regional level as well as more positive towards high-yielders amid being positioned mostly in the long-dated papers; further extension of positions in LatAm, Africa and Asia being envisaged.
