

INVESTMENT POLICY OF THE FUND

The primary objective of the Fund is sustainable investment, specifically to have a positive environmental impact. It seeks to go beyond mitigating environmental harm and aims to act as a catalyst for environmental change. While the Fund's primary environmental goal is climate change mitigation, it may also contribute to its sustainability objective through other environmental or social targets. Alongside sustainable investment, the Fund also targets capital growth. It primarily, though not exclusively, aims to achieve its goals through investments in equities and equity ETFs. To support its objective, the Fund may also invest in other transferable and equity-linked securities. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund's goal is sustainable investment, and it thus falls under Article 9 of the SFDR regulation. The Fund does not apply geographical or sector-specific restrictions, allowing it to invest globally, including in emerging markets. It intends to reach its objectives mainly with equity-type assets, primarily but not exclusively through publicly traded shares, ETFs, and open-ended, public investment funds. The Fund's goal is sustainable investment, which it seeks to achieve mainly through a positive impact on environmental factors within the ESG universe. To this end, it plans to invest primarily in companies with a low ecological footprint, which contribute through their activities to solving global environmental issues—such as transitioning to a lower-carbon economy or adopting a circular economic model. The Fund invests mainly, though not exclusively, in companies significantly involved in energy efficiency, renewable and clean energy, pollution control, water supply and technology, waste management and recycling, sustainable agriculture and forestry, and the sharing economy. The Fund does not have a geographical focus, as environmental interests extend beyond normal economic cycles, encompassing generally global, long-term processes that affect the entire world. Since the Fund aims to benefit from long-term growth and has equity market exposure, it is recommended for investors (1) who seek to invest in securities without geographical limitations and are backed by companies that focus on environmental factors in their activities, (2) whose primary goal is sustainable investment, and (3) who have a high risk tolerance and are willing to accept significant fluctuations in the value of their investments. The asset manager has discretionary authority to decide, based on market conditions, whether to reduce currency risk in positions denominated in currencies other than the target currency by entering into hedging transactions. For efficient portfolio management, the exposure from derivative transactions may not exceed 30% of the Fund's net asset value.

MARKET SUMMARY

Global financial and capital market movements in February were largely driven by Donald Trump's tariff hike policy. The US President imposed significant import tariffs on Mexico, Canada and China, which initially triggered a sharp sell-off in markets. Eventually, the last-minute announcement of a delay in the tariffs eased the mood, but the phenomenon illustrates the volatility of the markets. Despite the trade tensions, the US economy continued to show solid growth, with annual household consumption growth above 4% and subdued inflation creating a favorable environment for the equity markets. In Europe, investor sentiment was also driven by Trump's tariff announcements and the expected EU response. German and French inflation data came in slightly below expectations, reinforcing expectations of a rate cut by the European Central Bank (ECB) this year. As a result, the yield on two-year German government bonds fell by an unprecedented 19 basis points in February. This was partly due to the German elections, in which the AfD performed weaker than expected. In equity markets, the industrial and automotive sectors were particularly sensitive to US tariffs, while defense and energy stocks performed well. EU policymakers are expected to prepare targeted trade responses, which could lead to further volatility in the coming months. The Fund achieved a negative return during the month. The worst performing themes were electric transport, solar energy and general climate change, with large technology companies making up a significant proportion, while companies related to wind energy and the circular economy and recycling ended the month with a slight upturn. The Fund started the new month underweight against the benchmark by around 6%.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
