UI series USD MONTHLY report - 2025 FEBRUARY (made on: 02/28/2025)

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

Global financial and capital market movements in February were largely driven by Donald Trump's tariff hike policy. The US President imposed significant import tariffs on Mexico, Canada and China, which initially triggered a sharp sell-off in markets. Eventually, the last-minute announcement of a delay in the tariffs eased the mood, but the phenomenon illustrates the volatility of the markets. Despite the trade tensions, the US economy continued to show solid growth, with annual household consumption growth above 4% and subdued inflation creating a favorable environment for the equity markets. In Europe, investor sentiment was also driven by Trump's tariff announcements and the expected EU response. German and French inflation data came in slightly below expectations, reinforcing expectations of a rate cut by the European Central Bank (ECB) this year. As a result, the yield on two-year German government bonds fell by an unprecedented 19 basis points in February. This was partly due to the German elections, in which the AfD performed weaker than expected. In equity markets, the industrial and automotive sectors were particularly sensitive to US tariffs, while defense and energy stocks performed well. EU policymakers are expected to prepare targeted trade responses, which could lead to further volatility in the coming months. After a strong January, Central European markets closed the second month of the year with a very good performance, although the Hungarian market was an underperformer. Among the major stocks, Magyar Telekom performed better than expected with a better-than-expected quarterly result, and a rising dividend payout ratio contributed to the double-digit rise. At the mid-term level, Richter performed well, ending the month up over 5%. On the other hand, MOL was weak due to a result below analysts' expectations and OTP failed to rise this time.
