

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

VIG Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in VIG Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in VIG Moneymarket Fund is capable of fluctuation. VIG Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In February, Hungarian inflation rose again, contrary to market expectations, with year-on-year price increases accelerating from 5.5% in the previous month to 5.6%. The government has already expressed its concerns about high food prices, and if no favorable movement is observed in the coming weeks, some form of price caps may be reintroduced. Besides food prices, the price increases of many market services are also accelerating, with similar measures being considered to address these issues. At its February rate-setting meeting, the Monetary Council did not change the policy rate, leaving the base rate at 6.5%. The central bank's communication remained hawkish, making it unlikely that the rate-cutting cycle will resume in the near future. However, a clearer picture will only emerge following the change of the central bank governor in March. During the month, short-term yields rose slightly. The 3-month reference yield increased by 7 basis points to 5.95%, while the 6- and 12-month reference yields closed the month at 5.88% and 5.94%, respectively. The gap between short-term Discount Treasury Bill yields and the base rate has therefore continued to narrow. The fund continues to operate with lower duration than the benchmark index, but thanks to more favorable yield levels, we have become more open to purchasing longer-term securities.
