

VIG InnovationTrend ESG Equity Investment Fund

A series USD MONTHLY report - 2025 FEBRUARY (made on: 02/28/2025)

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

Global financial and capital market movements in February were largely driven by Donald Trump's tariff hike policy. The US President imposed significant import tariffs on Mexico, Canada and China, which initially triggered a sharp sell-off in markets. Eventually, the last-minute announcement of a delay in the tariffs eased the mood, but the phenomenon illustrates the volatility of the markets. Despite the trade tensions, the US economy continued to show solid growth, with annual household consumption growth above 4% and subdued inflation creating a favorable environment for the equity markets. In Europe, investor sentiment was also driven by Trump's tariff announcements and the expected EU response. German and French inflation data came in slightly below expectations, reinforcing expectations of a rate cut by the European Central Bank (ECB) this year. As a result, the yield on two-year German government bonds fell by an unprecedented 19 basis points in February. This was partly due to the German elections, in which the AfD performed weaker than expected. In equity markets, the industrial and automotive sectors were particularly sensitive to US tariffs, while defense and energy stocks performed well. EU policymakers are expected to prepare targeted trade responses, which could lead to further volatility in the coming months.

Equity markets managed to rise further until mid-month, when a weaker-than-expected services PMI data, combined with doubts about AI growth, high prices and over-positioning, triggered a fall. According to S&P Global, the PMI survey company, the optimism seen in the US economy at the beginning of the year has faded and economic players have become more cautious, and the word 'stagflation' is also becoming more common, which would not be a supportive environment for equity markets. In the second half of the month, investors rotated out of momentum stocks in particular, and a rotation started in the Magnificent7 stocks (Apple, Amazon, Alphabet, Meta, Microsoft, Nvidia, Tesla) with the largest capitalisation and the largest contributors to the market rise over the last two years. At the sector level, the cyclical consumer discretionary, communication services and IT sectors were by far the weakest in February. Tesla suffered the biggest fall, having already given back much of the rise following the US presidential election last November. Now the news that Tesla's sales in the EU fell by 50% in January has rattled the market. Nvidia also reported this month. It posted slightly better-than-expected revenue and profit numbers for the fourth quarter, but its first-quarter forecast was slightly below analyst expectations. We continued our rotation within the AI sector towards the software industry during the month, as well as a shift away from large-cap stocks towards mid- and small-caps.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000732938
Start:	03/11/2024
Currency:	USD
Net Asset Value of the whole Fund:	18,040,425 USD
Net Asset Value of A series:	396,297 USD
Net Asset Value per unit:	1.118831 USD
