

## INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

## MARKET SUMMARY

Equity markets managed to rise further until mid-month, when a weaker-than-expected services PMI data, combined with doubts about AI growth, high prices and over-positioning, triggered a fall. According to S&P Global, the PMI survey company, the optimism seen in the US economy at the beginning of the year has faded and economic players have become more cautious, and the word 'stagflation' is also becoming more common, which would not be a supportive environment for equity markets. In the second half of the month, investors rotated out of momentum stocks in particular, and a rotation started in the Magnificent7 stocks (Apple, Amazon, Alphabet, Meta, Microsoft, Nvidia, Tesla) with the largest capitalization and the largest contributors to the market rise over the last two years. At the sector level, the cyclical consumer discretionary, communication services and IT sectors were by far the weakest in February. Tesla suffered the biggest fall, having already given back much of the rise following the US presidential election last November. Now the news that Tesla's sales in the EU fell by 50% in January has rattled the market. Nvidia also reported this month. It posted slightly better-than-expected sales and profit numbers for the fourth quarter, but its first-quarter forecast was slightly below analyst expectations. We continued our rotation within the AI sector towards the software industry during the month, as well as a shift away from large-cap stocks towards mid- and small-caps. We also added some defense sector stocks as new exposure to the Fund, as the structural increase in defense spending around the world could bring up to hundreds of billions of dollars in new orders per year for companies in the sector.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
