

VIG Developed Markets Government Bond Investment Fund

A series HUF MONTHLY report - 2025 MARCH (made on: 03/31/2025)

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to create a highly defensive investment portfolio for its Investors, which typically invests in developed-market government bonds and related exchange-traded derivatives. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of bonds issued by foreign states and foreign companies through public offerings. With regard to foreign securities, the Fund only purchases publicly traded securities listed on a foreign stock exchange. It keeps the planned share of non-investment grade securities low. The proportion of bonds that can be held in the Fund at any given time may reach the prevailing legal maximum. In order to ensure liquidity, the Fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

Bears dominated the US equity markets in the first half of March, with all major stock indices falling. The total capitalization of the US stock market fell by 4,000 billion dollars, a significant part of this huge sum ending up on European markets. It is difficult to say at this stage whether America has simply undergone a correction or whether we are witnessing the start of an overseas bear market, but it is clear that the belief in American exceptionalism has not prevailed. From a macroeconomic point of view, it is not clear where the United States is going either. Growth remains strong, but there are signs of weakening, for example with slowing household consumption. Inflation is more stubborn than the Fed had expected, limiting the scope for interest rate cuts. Europe, on the other hand, has received an extraordinary boost, with many investors looking for undervalued European equities after the sell-off in the US stock market. Significant money was poured into defense sector stocks on the uncertain outcome of the Russia-Ukraine war and the expected increase in defense spending. Germany's DAX stock index rose to a historic high, supported by the acceptance of Germany's economic policy turnaround and the massive infrastructure and defense spending that it entails. Long-term bond yields fell and the euro strengthened, partly due to a weakening US dollar.

Last month, we increased the portfolio's interest rate risk by purchasing 30-year U.S. Treasury bonds, expecting that a slowing U.S. economy and a rise in risk aversion could lead to strong performance in developed bond markets. At the same time, we also increased the portfolio's U.S. dollar exposure following the significant weakening of the dollar in recent weeks.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% Bloomberg Global Treasury Majors ex Japan Total Return Index Unhedged USD
