## **INVESTMENT POLICY OF THE FUND**

The AEGON IstanBull Equity Fund primarily targets the stock exchange-traded shares of companies that maintain an active presence in Turkey, or generate a substantial proportion of their revenues in the Turkish market. The Fund predominantly invests in equities, but its portfolio also contains Hungarian bonds and discount treasury bills, currencies and money-market products, to ensure the Fund's liquidity. The equity investments are usually denominated in foreign currency; however the fund may hedge some or all of the currency risk arising from these liabilities by concluding forward or option transactions. Although the Turkish market promises a high potential return, the value of investments may display a marked degree of fluctuation in the short term, and therefore it is advisable to treat the Fund as a long-term investment. The Fund Management primarily bases its investment decisions on its own fundamental analyses, but it also makes use of the information and analyses provided by other investment service providers, banks and independent research companies, in the interests of reducing risks and maximising returns. The fund's benchmark: 90% TR20I Index + 10% ZMAX Index.

## **MARKET SUMMARY**

Global leading indicators continued to come out on the strong side in February, but risk aversion returned to markets amid Mideast turmoil and it appears geopolitical events will remain the market driver near term. Investors are now worrying that rising oil prices are less a symptom of macro strength but more a threat to growth and may hurt the world economy.

Turkish equities started the year as bad (-8.5% YTD) as last year (-7% Jan-Feb in 2010), but this time they underperformed the global equity markets heavily firstly on local monetary policy, secondly on global risk aversion. The Turkish economy is doing well, the manufacturing PMIs continues heading north into highly expansionary territory (58.5), but the weaker lira affected its weakest link, the C/A deficit.

We think the Turkish market became oversold and its current level may provide good long-term entry point.
