Other assets	5.34%
Total investment assets	100.00%
Derivative products	63.62%
Net corrected leverage	75.58%

tive trading of ours did not change at all. We still hold our short position in the EUR/RON we opened at 4.3595 which made us a great return since the Romanian Lei significantly appreciated against the Euro. The corn and wheat positions opened on the soft commodities market did not make any big movement until the end of the month until early January when they turned sufficiently profitable too, alongside the increase of their weighting in the Fund's portfolio. Accordingly, we are long 140 contracts on wheat and 180 contracts on corn in the first third of January, 2010. On the last day of the year we opened a 450 contracts long position on the Indian futures market (Nifty futures). During December we also built up a middle-sized EUR/JPY long position, which we widened in January 2010, resulting in a position value of EUR 10 million in EUR/JPY for the Fund. The year's last month was far from boring with the Fund further taking up a EUR/HUF short positions from levels of 280.06 and 279.56 which brought attractive returns as well, since the HUF's appreciation against the EUR was remarkable. It is worthwhile to compare the positions' sizes relative to those of the Atticus Alfa Derivative Fund and it becomes instantly clear that the Atticus Vision Derivative Fund deploys a good deal of additional leverage in order to achieve those higher returns within the 30–35% range. Since this will naturally result in the Fund's volatility rising as well, we kindly ask our investors to tighten their mental seat-belts. Fund management is prepared for highly active trading at higher levels of leverage besides moderately strict stop-loss rules but stays aware of the 10% maximum drawdown, too.

### NET Yield Performance of the Fund:

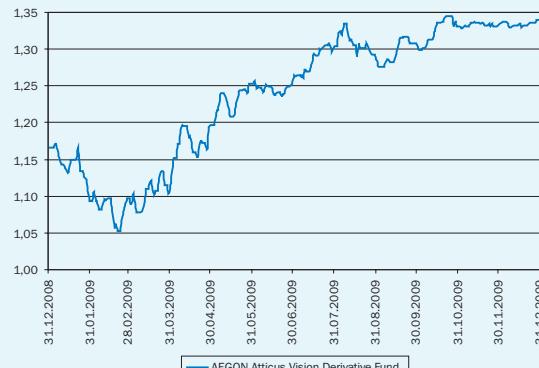

Time horizon	12 months*	2009 year	2008 year
Net return of the Fund*	14.99%	14.99%	3.21%
Benchmark performance**	12.05%	12.05%	9.70%

\* It shows the net performance of the fund until 31/12/09

The Fund was launched on 11/05/07

\*\* The net return of the benchmark index.

### Market Summary:

In this year's last month, the AEGON Atticus Vision Derivative Fund achieved 0.56% nominal return. The 12 month historical performance for the Fund is at 14.99% while the net benchmark returned only 12.05% over the same period, proving a serious overperformance of 2.94%. The average annual return since the Fund's inception accounts to 11.79%. It is joyful news that in consequence of the favorable returns shown above and the constant inflow of capital from new investors the Fund's net asset value grew by HUF 2,190,351,130.- from HUF 3,921,923,500.- (Dec-31-08) to HUF 6,112,274,630.- (Dec-31-09) exactly a year later. The Atticus Vision promotional time window during January 2010 further added to this favorable tendency. In December, the Fund strived to maintain its high level of return and advanced 0.56% while the MAX index slid -1.28% due to an increase of yields on the market. All of this did not mean that we were not opening any new positions in the last month of this year, only our investment policy became more careful while the ac-
