**Benchmark:** The main rate of the ECB (European Central Bank)

on the first trading day of the year. **Net Asset Value (EUR):** 1 356 748 **Net Asset Value per share:** 0.935401

## **Investment Policy** of the Fund:

The AEGON Hungary Fund Management Co. created Hungary's first EUR denominated total return fund, the AEGON EuroExpress Fund. The fund acts as "long-only", so it can only take long positions. It is not allowed to take uncovered short positions to profit from the dropping prices. We launched this fund because a lot of our clients said that they don't feel experienced enough in the field of investment, so it is difficult for them to decide in which fund they should invest. The constantly changing market situation causes a big dilemma for the investors, bringing to mind questions of when and how they should re-allocate their portfolio. The AEGON EuroExpress Fund resolves these questions and it takes the responsibility for making the right investment decision for private investors, who can handle low/moderate risk and who are not too risk-averse. According to the opinion of the fund manager, our Fund is allowed to invest in any type of Hungarian/International bond or equity as well as in Hungarian/International currencies. The fund manager's financial leeway is very wide, even while paying maximal attention to legal compliance. The aim of the fund is to provide its investors with a good yield at low/moderate volatility. In other words, the Fund targets a high Sharpe-ratio. The Fund's benchmark is the base rate of the ECB (European Central Bank) which is effective on the first trading day of the year. The fund manager is allowed to hedge the foreign exchange risk entirely or partly by using currency futures. The Fund offers an excellent opportunity for investors who wish to invest on a euro basis, and would like to achieve much higher returns than the euro denominated bank deposits can offer, while the level of risk is moderately low.

repayment default have been the hottest topics, and had a diminishing effect on risk appetite. We expect these problems to exist during the whole year: the regulatory authorities are starting the monetary tightening in more and more countries, and refinancing need of government debts can make pressure on the gilt-edged market. Because of this, expansion of positions at the stock markets are not considered, the liquid part of the portfolio will be used to purchase short term debt securities. The weakness of the Greek government bonds have created favorable sentiment for purchases (high yields compared to other EUR denominated government bonds), that is why we have built up exposure at the expiration range of Apr-May. The cash position in the Fund has gone down to 15%. One of our biggest holdings, the corporate bonds without fix coupons could appreciate a lot due to their high sensitivity to yields in a favorable environment, and they can also gain if the yields in the money markets are raising.
