Other Assets	-0.12%
Total investment assets	100.00%
Net corrected leverage	30.67%
Derivative products	0.90%

Investment Policy of the Fund:

The AEGON Hungary Fund Management Co. created Hungary's first EUR denominated total return fund, the AEGON EuroExpress Fund. The fund acts as "long-only", so it can only take long positions. It is not allowed to take uncovered short positions to profit from the dropping prices. We launched this fund because a lot of our clients said that they don't feel experienced enough in the field of investment, so it is difficult for them to decide in which fund they should invest. The constantly changing market situation causes a big dilemma for the investors, bringing to mind questions of when and how they should re-allocate their portfolio. The AEGON EuroExpress Fund resolves these questions and it takes the responsibility for making the right investment decision for private investors, who can handle low/moderate risk and who are not too risk-averse. According to the opinion of the fund manager, our Fund is allowed to invest in any type of Hungarian/International bond or equity as well as in Hungarian/International currencies. The fund manager's financial leeway is very wide, even while paying maximal attention to legal compliance. The aim of the fund is to provide its investors with a good yield at low/moderate volatility. In other words, the Fund targets a high Sharpe-ratio. The Fund's benchmark is the base rate of the ECB (European Central Bank) which is effective on the first trading day of the year. The fund manager is allowed to hedge the foreign exchange risk entirely or partly by using currency futures. The Fund offers an excellent opportunity for investors who wish to invest on a euro basis, and would like to achieve much higher returns than the euro denominated bank deposits can offer, while the level of risk is moderately low.

Market Summary:

There are no new topics on the markets since February. When does the period of cheap money cease to exist? How can the

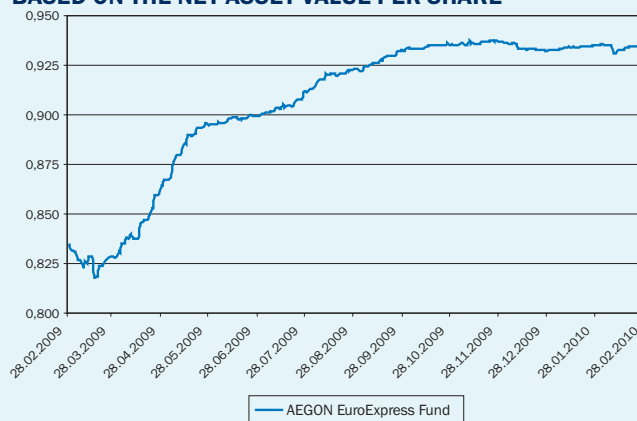

developed world cope with the increasing deficits and public debts? Is there a resolution for the Greek problem, or it will start to spread? These concerns are not strong enough to call a new bear market to life, but temporal increases in volatility and one or two weeks of turbulent periods on the stock markets show, that cautious investment policy might be applicable. That is why we have only slightly extended our exposure to risk, while the defensive approach has been kept. Smaller corrections of January and February provided some "buying in" opportunities on the share markets, that is why we have spent from the low yielding stock of cash and purchased equities. Our major selection criteria's were: low beta and high rate of dividend. We have invested 2% of assets into equities as the start.

NET Yield Performance of the Fund:
