INVESTMENT POLICY OF THE FUND

The AEGON Hungary Fund Management Co. launched the AEGON Central-European Bond Fund, so that potential investors could profit from those countries' bond markets which offer high-yields. Although these countries are developing ones, their macroeconomic background is stable and they are on a growth path. The anticipatory yield of the Fund is higher than the yield of a domestic bond fund, but the risk is also a bit bigger. A high yield, or "junk bond" is a bond issued by a country or a company that is considered to have higher credit risks. The credit rating of a high yield bond is considered "speculative grade", or below "investment grade". This means that the chance of default with high yield bonds is higher than for other bonds. Their higher credit risk means that "junk bond" yields are higher than bonds of better credit quality. Studies have demonstrated that portfolios of high yield bonds have higher returns than other bond portfolios, suggesting that the higher yields more than compensate for their additional default risk. The investment possibilities of the Fund are very wide, so the portfolio manager has a widespread financial leeway to build up an optimal portfolio. We target the utmost yield by taking the lowest risk. By taking investment decisions we use fundamental and technical analysis, and we certainly keep an eye on the market sentiment. Our investment decisions are supported by a special investment-planning model, which contains important macroeconomical data and indicators, like the anticipated level of inflation in these countries, their GDP growth, their credit ratings and so on. The portfolio manager generates a so-called risk - yield map, by focusing on the anticipated macroeconomic environment, the anticipated yield curve, and the above-mentioned model. Ultimately, the map demonstrates which risk-yield pairs are considered to be safe and offer relatively high yields at the same time.

Receivables	0.00%
Total investment assets	100.00%
Net corrected leverage	45.44%
Derivative products	45.46%

MARKET SUMMARY

Investor pessimism towards Hungarian assets reversed in January. The early leaks on the content of the February structural reform were positive, concerns of a downgrade of sovereign into sub-investment grade category eased, the end of the rate hike cycle was seen around the corner. These changes in investor attitude as well as a more positive assessment of the European sovereign debt situation led to a massive rally given the light positioning among both locals and internationals. At the same time the Polish market came under stress as the reluctance of the government to adjust fiscal policy began to worry markets. This change in sentiment also dragged PLNHUF lower, which was detrimental to performance. That said, the Hungarian bond rally and active positioning kept the January performance in the positive territory.

NET YIELD PERFORMANCE OF THE FUND:
