Investment Policy of the Fund:

The AEGON Hungary Fund Management Co. launched the AEGON Central-European Bond Fund, so that potential investors could profit from those countries' bond markets which offer high-yields. Although these countries are developing ones, their macroeconomic background is stable and they are on a growth path. The anticipatory yield of the Fund is higher than the yield of a domestic bond fund, but the risk is also a bit bigger. A high yield, or "junk bond" is a bond issued by a country or a company that is considered to have higher credit risks. The credit rating of a high yield bond is considered "speculative grade", or below "investment grade". This means that the chance of default with high yield bonds is higher than for other bonds. Their higher credit risk means that "junk bond" yields are higher than bonds of better credit quality. Studies have demonstrated that portfolios of high yield bonds have higher returns than other bond portfolios, suggesting that the higher yields more than compensate for their additional default risk. The investment possibilities of the Fund are very wide, so the portfolio manager has a widespread financial leeway to build up an optimal portfolio. We target the utmost yield by taking the lowest risk. By taking investment decisions we use fundamental and technical analysis, and we certainly keep an eye on the market sentiment. Our investment decisions are supported by a special investment-planning model, which contains important macroeconomic data and indicators, like the anticipated level of inflation in these countries, their GDP growth, their credit ratings and so on. The portfolio manager generates a so-called risk – yield map, by focusing on the anticipated macroeconomic environment, the anticipated yield curve, and the above-mentioned model. Ultimately, the map demonstrates which risk-yield pairs are considered to be safe and offer relatively high yields at the same time.

The asset allocation of the Fund, 31.03.2010

Hungarian T-bills	0.00%
Hungarian Government Bonds	30.94%
International Bonds	68.52%
Government paper repo	0.00%
Current account	13.44%
Other assets	-12.90%
Total investment assets	100.00%
Net corrected leverage	39.73%
Derivative products	0.00%

Market Summary:

The bond markets of the "Visegrad" group performed very well in March, especially the Hungarian. The fact, that base rate increase has been postponed in the Czech Republic and in Poland and the extreme level of liquidity next to favorable global sentiment helped the regional debt securities to strengthen. Many factors suggest that the regional bond market is still a good place to invest: rate cycle extended in time in the developed world, the inflationary outlooks are favorable; there is a general positive view on the emerging market. Being cautious can pay off, because the threat of monetary tightening amid emerging global prosperity increases, which might drive the yields higher corrupting the valuation levels in the region, can manifest in real yield increase.

NET Yield Performance of the Fund:

Time horizon	12 months*	2009 year	2008 year
Net return of the Fund*	18.28%	16.47%	-16.10%
Benchmark performance**	8.14%	26.35%	-3.70%
