Net Asset Value (HUF): 473 980 714
Net Asset Value per share: 1.080806

Investment Policy of the Fund:

The AEGON Hungary Fund Management Co. launched the AEGON Central-European Bond Fund, so that potential investors could profit from those countries' bond markets which offer high-yields. Although these countries are developing ones, their macroeconomic background is stable and they are on a growth path. The anticipatory yield of the Fund is higher than the yield of a domestic bond fund, but the risk is also a bit bigger. A high yield, or "junk bond" is a bond issued by a country or a company that is considered to have higher credit risks. The credit rating of a high yield bond is considered "speculative grade", or below "investment grade". This means that the chance of default with high yield bonds is higher than for other bonds. Their higher credit risk means that "junk bond" yields are higher than bonds of better credit quality. Studies have demonstrated that portfolios of high yield bonds have higher returns than other bond portfolios, suggesting that the higher yields more than compensate for their additional default risk. The investment possibilities of the Fund are very wide, so the portfolio manager has a widespread financial leeway to build up an optimal portfolio. We target the utmost yield by taking the lowest risk. By taking investment decisions we use fundamental and technical analysis, and we certainly keep an eye on the market sentiment. Our investment decisions are supported by a special investment-planning model, which contains important macroeconomic data and indicators, like the anticipated level of inflation in these countries, their GDP growth, their credit ratings and so on. The portfolio manager generates a so-called risk - yield map, by focusing on the anticipated macroeconomic environment, the anticipated yield curve, and the above-mentioned model. Ultimately, the map demonstrates which risk-yield pairs are considered to be safe and offer relatively high yields at the same time.

The asset allocation of the Fund, 30.06.2010

Hungarian T-bills	0.00%
Hungarian Government Bonds	22.29%
International Bonds	69.35%
Government paper repo	2.83%
Current account	0.99%
Other assets	4.55%
Total investment assets	100.00%
Net corrected leverage	18.79%
Derivative products	0.99%

Market Summary:

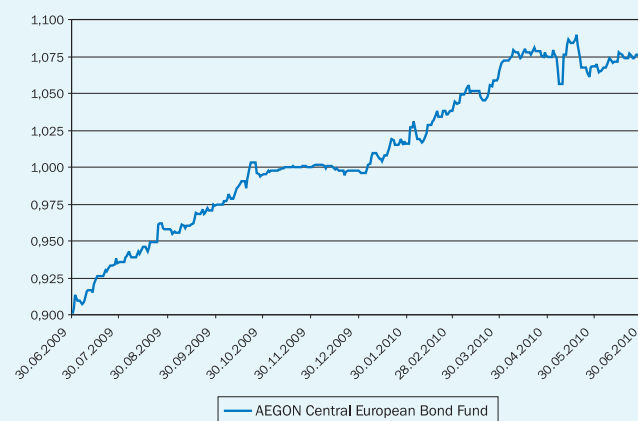

The regional diversification was rewarding and our Fund was able to gain in June, thanks to the Czech and Polish bond strength, and to the underperformance of the Hungarian forint compared to the regional currencies. The Czech weight continued to increase in exposure in the last month since the outcome of the election result substantially improved assessment of the fiscal policy has, and the valuation levels are also good on the longer maturities. The Polish bond market suffers pressure from the uncertainty of the presidential election and Hungarian yields are kept low by the supply demand conditions, that is why we seek for more favorable investment opportunities, such as the Hungarian government bonds, issued in euro.

NET Yield Performance of the Fund:
