Net Asset Value (HUF): 520 832 087
Net Asset Value per share: 1.126696

Investment Policy of the Fund:

The AEGON Hungary Fund Management Co. launched the AEGON Central-European Bond Fund, so that potential investors could profit from those countries' bond markets which offer high-yields. Although these countries are developing ones, their macroeconomic background is stable and they are on a growth path. The anticipatory yield of the Fund is higher than the yield of a domestic bond fund, but the risk is also a bit bigger. A high yield, or "junk bond" is a bond issued by a country or a company that is considered to have higher credit risks. The credit rating of a high yield bond is considered "speculative grade", or below "investment grade". This means that the chance of default with high yield bonds is higher than for other bonds. Their higher credit risk means that "junk bond" yields are higher than bonds of better credit quality. Studies have demonstrated that portfolios of high yield bonds have higher returns than other bond portfolios, suggesting that the higher yields more than compensate for their additional default risk. The investment possibilities of the Fund are very wide, so the portfolio manager has a widespread financial leeway to build up an optimal portfolio. We target the utmost yield by taking the lowest risk. By taking investment decisions we use fundamental and technical analysis, and we certainly keep an eye on the market sentiment. Our investment decisions are supported by a special investment-planning model, which contains important macroeconomic data and indicators, like the anticipated level of inflation in these countries, their GDP growth, their credit ratings and so on. The portfolio manager generates a so-called risk - yield map, by focusing on the anticipated macroeconomic environment, the anticipated yield curve, and the above-mentioned model. Ultimately, the map demonstrates which risk-yield pairs are considered to be safe and offer relatively high yields at the same time.

Market Summary:

After underperforming nearly all summer, the Hungarian bond and currency markets began to bounce back in September. The interna-

The asset allocation of the Fund, 30.09.2010

Hungarian T-bills	0.00%
Hungarian Government Bonds	29.00%
International Bonds	69.39%
Government paper repo	0.00%
Current account	1.34%
Other assets	0.27%
Total investment assets	100.00%
Net corrected leverage	32.01%
Derivative products	18.23%

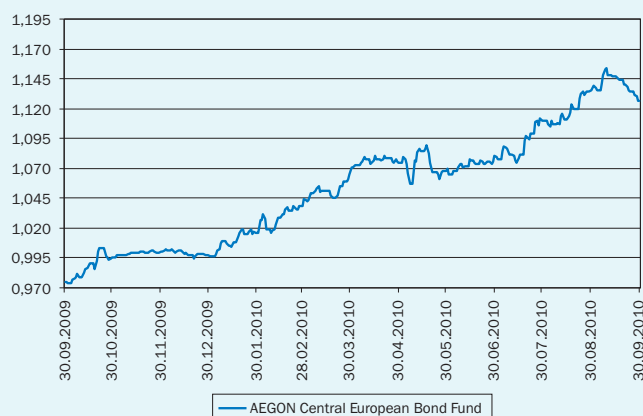

tional sentiment, which reflects the beneficial impact of the quantitative easing program, favours emerging-market investments, especially the least overbought market, which for the time being is still Hungary. Besides this, investor perception of the domestic market was also given a boost by the government's open commitment to budgetary discipline, and to maintaining next year's deficit target at below 3%. With its 70% exposure to Poland and the Czech Republic, our fund was adversely affected by the strengthening of the forint against the other currencies of the region. In addition, following the previous run-up in prices, there was a small correction on the Czech bond market. As a combined effect of these factors, the fund suffered a slight fall this month, although its year-to-date yield is still in the double digits.

NET Yield Performance of the Fund:
