INVESTMENT POLICY OF THE FUND

The AEGON Hungary Fund Management Co. launched the AEGON Central-European Bond Fund, so that potential investors could profit from those countries' bond markets which offer high-yields. Although these countries are developing ones, their macroeconomic background is stable and they are on a growth path. The anticipatory yield of the Fund is higher than the yield of a domestic bond fund, but the risk is also a bit bigger. A high yield, or "junk bond" is a bond issued by a country or a company that is considered to have higher credit risks. The credit rating of a high yield bond is considered "speculative grade", or below "investment grade". This means that the chance of default with high yield bonds is higher than for other bonds. Their higher credit risk means that "junk bond" yields are higher than bonds of better credit quality. Studies have demonstrated that portfolios of high yield bonds have higher returns than other bond portfolios, suggesting that the higher yields more than compensate for their additional default risk. The investment possibilities of the Fund are very wide, so the portfolio manager has a widespread financial leeway to build up an optimal portfolio. We target the utmost yield by taking the lowest risk. By taking investment decisions we use fundamental and technical analysis, and we certainly keep an eye on the market sentiment. Our investment decisions are supported by a special investment-planning model, which contains important macroeconomical data and indicators, like the anticipated level of inflation in these countries, their GDP growth, their credit ratings and so on. The portfolio manager generates a so-called risk - yield map, by focusing on the anticipated macroeconomic environment, the anticipated yield curve, and the above-mentioned model. Ultimately, the map demonstrates which risk-yield pairs are considered to be safe and offer relatively high yields at the same time.

Other assets	8.20%
Government paper repo	0.00%
Current account	1.97%
Liabilities	0.08%
Receivables	0.01%
Total investment assets	100.00%
Net corrected leverage	60.16%
Derivative products	76.94%

MARKET SUMMARY

Our Fund came through of November with slight losses. Yields elevated on the bond markets, partly due to the euro debt concerns in the last month. Strengthening economic cycle had effect on the monetary policy, as increase of base rate came closer in time both in Czech Republic and in Poland. The Hungarian Central Bank has lifted the rate by 25bp. The HUF depreciation had positive effect on the performance and our defensive positioning has started to bear fruits. The Fund's volatility is still moderate and it has high profit potential.

NET YIELD PERFORMANCE OF THE FUND:

Time horizon	12 months*	2009 year	2008 year
Net return of the Fund*	11,14%	16,47%	-16,10%
