INVESTMENT POLICY OF THE FUND

Hungary's first total return fund, the AEGON MoneyMaxx Expressz Mixed Fund opened introduced a new category to the Hungarian investment fund market. We launched this fund because a lot of our clients pointed out that they don't feel experienced enough in the field of investment, so it is difficult for them to decide in which fund they should invest. The constantly changing market situation imposes a challenge for the investors, raising the questions of when and how they should re-allocate their portfolio. The AEGON MoneyMaxx Expressz Mixed Fund meets these needs, and shoulders the responsibility for making the right investment decision for private investors who want to get familiar with moderate risk and who are not too risk-averse. According to the opinion of the fund manager, our Fund is allowed to invest in any kind of Hungarian bond or equity, or it can invest in international bonds or equities. The fund manager's financial leeway is very wide – while paying maximal attention to the compliance with the law – meaning, on one hand, 100% of the portfolio can be invested in equities or, on the other hand, the portfolio can contain T-bills up to 100%. We recommend this Fund to investors who are willing to take more risks (in some cases the risk may be similar when investing in equity funds), as well as to investors who prefer their savings constantly managed and transferred from one asset class to another, in accordance with the changing market situation and the anticipation of professional portfolio managers.

Total investment assets	100.00%
Net corrected leverage	36.33%
Derivative products	14.41%

MARKET SUMMARY

AEGON Moneymaxx Expressz Mixed Fund suffered slight losses in November. Concerns about the euro zone came to surface again on international level, and the Irish rescue plan was only able to relieve the markets for short term. Global selling pressure reached the Hungarian bond market at a very vulnerable stage, as the government's economic policy did not receive warm welcome nor abroad either internally, because it has targeted the institutions of long term economic stability (HNB, Pension Funds). The Hungarian National Bank has increased the base rate by 25bp for a big surprise of the most market player, so the price effect of the measurement pushed the yield curve even higher. The equity markets showed the signs of instability, that is why our exposure to Morgan Stanley China A, Tracker Fund of Hong Kong, RIMM has been liquidated although the defensive Pfizer has been maintained.
